Program Launcher Helps Users Get Started

## General Information

### The Computer Will

**A**s we grow older, many of us write wills as a means of ensuring our intentions are carried out after we pass on. If you have invested a lot in your computer system, you will more than likely want an interested heir to receive and care for your CoCo; a will provides a way of seeing that this happens. But what about a *usage will*?

#### Items to Address:

- description of the equipment
- how the system is set up
- instructions for powering up
- program loading directions
- location(s) of personal data
- operating hints and tips
- usernames and passwords
- resources and manuals

Some time ago, Lee Deuell posted on Delphi a document titled "Color Computer 3 Users Guide/Manual." This article describes how his CoCo is set up, what software he has, and how to use the system. When we saw a copy, we began to think how useful such a guide could be for someone who hasn't used the computer.

Lee starts the guide by giving some background information (history) about the Color Computer. He then describes the physical aspects of the CoCo (the ports, switches, etc.) and how they are used. After the groundwork is laid, Lee explains how to

use the various alternate DOSs he has. He closes by naming a support person — someone who can answer questions and solve problems as they arise.

Sprinkled throughout Lee's article are many hints and tips, such as how to set the printer speed and how to load machine-language programs. Also included are explanations of where each piece of equipment is located, how the disks are organized, and where to find his RAINBOW library and software manuals. Most important, Lee includes his Delphi username and tells where his password can be found. After all, nobody else should know these things, and Delphi will continue to bill. It could be vital that certain others know where to find this information.

While such a usage will could be very important when the inevitable happens, its usefulness doesn't end there. Suppose you have an accident and are stuck in the hospital. Your spouse may then need to handle your personal affairs, and the necessary information might be stored on your disks. Or perhaps you are away on an extended business trip. What happens if your teenage child needs to use your computer (for the first time) to write a book report?

We think Lee's idea is excellent. It gives you a way of describing your specific CoCo setup to others who may need or want to use it — a perfect CoCo legacy. We doubt whoever first said "Where there's a will, there's a way" had computers in mind. But it certainly fits.

## Tutorial

### Spreadsheet Gets Things Right on the Course

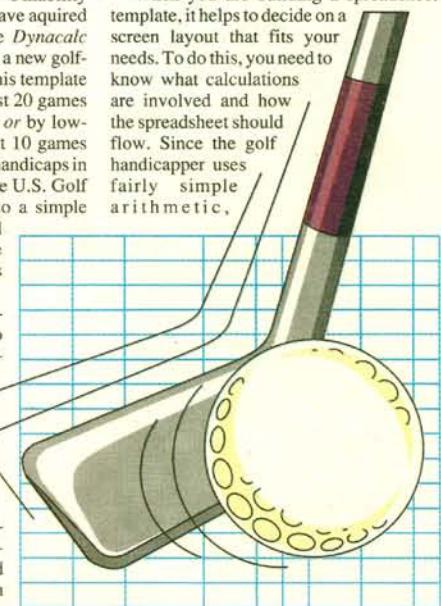

**W**hen I wrote my first article on using a spreadsheet for golf handicapping ("Spectacular Golf Handicapping," *Hot CoCo*, May 1985), I noted that a serious shortcoming was Spectacular's inability to sort data. Since that time, I have acquired the Disk BASIC version of the *Dynacalc* spreadsheet and have developed a new golf-handicapping template. With this template I can sort my scores, list the last 20 games played (in chronological order or by low-high score), determine the best 10 games out of the last 20, and compute handicaps in accordance with the rules of the U.S. Golf Association (USGA). It is also a simple matter to update the file and print the results, making the CoCo a handy tool for golf clubs as well as personal use.

This article describes step-by-step how you can use a CoCo spreadsheet to build a golf-handicapping template. Even though I developed it using *Dynacalc*, the template uses only simple math and functions that should be supported by most Color Computer spreadsheets. The instructions that follow are aimed at users of *Dynacalc* (both the Disk BASIC and OS-9 versions), but I explain what I am doing at all times — with a little study you should be

able to duplicate my work with other spreadsheets. Let's get started.

#### Setting Up the Template

When you are building a spreadsheet template, it helps to decide on a screen layout that fits your needs. To do this, you need to know what calculations are involved and how the spreadsheet should flow. Since the golf handicapper uses fairly simple arithmetic,

See Spreadsheet on Page 14

### CoCo PRO! Aquires Howard Medical

Ross Litton, president of Howard Medical Company, recently announced that Howard Medical has sold its business to CoCo PRO!. The transaction includes inventory, present and future customers and priority products. In a press release dated January 3, 1992, Ross stated, "I have worked with Dave Myers for the last several years and have found his commitment to the Color Computer as well as his ability as a businessman to be unsurpassed." Ross also said, "This hobby... has brought me more happiness and fun than I can express."

Support will continue for current owners of Howard Medical products. According to Dave Myers, president of CoCo PRO!, "Existing warranties on Howard Medical products will be honored." In addition, CoCo PRO! intends to pick up production of the Slot Pak and Puppo Keyboard Interface products. Regarding this business move, Dave said, "Howard Medical has provided fantastic service to the CoCo Community, and we are proud that we have the opportunity to continue that tradition."

## Where It All Started

It was 40 years ago (!) this fall that the "Brownell News" — my very first effort at being a publisher — was born. I had found a little "printing press" that my mother bought me. It used rubber letters for type, and as you filled lines of type, you hooked them onto the press and fed the paper through by hand. It wasn't very fancy, but it worked. So Jim Burmeister, my next-door neighbor (actually there was an empty lot next door, and he was next door to that), and I decided we would publish a newspaper.

If you worked at it pretty hard, you could get 10 or 12 lines of type on a single sheet of paper. The paper had to be cut to about 5½ inches wide, so there really wasn't a whole lot of news. But being in the "news business" got us both pretty interested in world events — we followed the Korean Conflict and the political conventions that year, and were unabashedly pro-Eisenhower.

Since the "Brownell News" (the street we lived on in Glendale, Missouri, was Brownell Avenue) managed about 10 lines a week, we did not have pages devoted to specific topics, but we did have lines. Our editorial line was WIN WITH IKE NOVEMBER 6, (this was about all the space we had for a single line). Sports was usually something like CARDS WIN 5-2 BROWNS LOSE 4-0, and it did not matter if the scores were several days old. Jim and I sold about a dozen subscriptions to the "Brownell News" for five cents apiece; each issue was hand-delivered to your door, once a week (usually after a rainy day).

You all are better off than those subscribers were, since we never bothered to specify how long the subscriptions were for. And interest flagged somewhat when we got in trouble for getting ink all over our hands (while taking the letters out of the little metal things so we could reset them for the following week). Besides, Ike won the election.

My father was a staunch supporter of Adlai Stevenson, so the politics were hot and heavy at home that fall. Dad put up a life-sized poster of Stevenson on his bedroom door, but it scared the dog, Spot (who thought a stranger was in the house and barked at it constantly). Mom made him take it down. It wasn't that she didn't like Stevenson — she just couldn't stand the barking.

My political reward was a trip to Washington for Ike's inauguration. My cousin Louis, who lives in Washington, invited me and gave me a marvelous tour of the city for the three days before the inauguration (though he supported Stevenson, too). We went to the parade; I took a million pictures.

When I got home, I gave a presentation about Washington, D.C., for the whole North Glendale School. Bursting with pride, my mom popped for about \$50 for a mimeograph machine so it would be easier to put out the "Brownell News." Thus, my publishing career was reborn.

Rose Marion Burmeister and Carl "Sonny" Thorpe were the typists, and the paper usually had six to eight pages. We honored all our subscriptions (and even sold more). Our biggest story was what would be called "investigative reporting" today — we discovered who among the kids in the neighborhood dressed up as a ghost from time to time and scared the little kids.

The most difficult job, of course, was getting Rose Marion and Sonny to do the typing. They were the only people in the neighborhood who could type, so they had to do it. We used those old blue stencils you had to "cut" through, then Jim and I would proofread the stencils and try to fix the mistakes.

The "Brownell News" lasted for many issues and, at one point, had a staff of about a dozen kids. I guess the adults thought we were cute. Heck, we even sold an ad — to the Glendale Market — though it probably helped that Mom bought all her groceries there.

I mention all of this because the "Brownell News" was really a huge undertaking, especially for a bunch of kids ranging in age from eight to about 10 (with the exception of Rose Marion and Sonny, who were in Kirkwood High School). Was I born 40 years too soon?

Well, 30, maybe.

Consider that you or your children can duplicate this neighborhood newspaper feat

quite easily using your CoCo. Our problems were the physical production of the paper; yours would be merely to collect the news. You think your CoCo is not worth every penny you've sunk into it? And more!

This is what the Color Computer — or any computer for that matter — is for; it gives you the time to do the creative things without having to take the time for the mechanical aspects. With a CoCo, the "Brownell News" could have been a daily!

\*\*\*\*\*

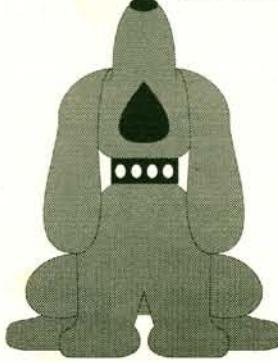

I am pleased to report that some of the preliminary comments about our new format are more than generally positive. This pleases us a lot here at THE RAINBOW because we worked very hard to make the new look useful and easy to use for all of you.

We have received a couple of negatives, too. But not very many. And, as I think you will see, we believe our new format will get better as we get more used to doing things with it.

One footnote: I said last month that we would have near a 9 percent increase in editorial space because of the new format. At what was pretty much the last minute — and after that column was written — I decided to make the cover "newspaper-like" rather than like a magazine. That added a whole page of editorial material to your RAINBOW.

And I think it looks nice, too.

— Lonnie Falk

## Letters to the RAINBOW

## Connecting With the Past

## Editor:

I congratulate you for how long you've lasted. I'm an old-timer — I've had a CoCo since December 1982, when I bought a 16K F-board CoCo on sale for \$299. Not many magazines have lasted as long as THE RAINBOW. Who remembers Hot CoCo or The Color Computer Magazine? I sincerely hope you continue for years to come; I've got too much invested in my CoCo to buy anything else.

I need some help. I am trying to contact five people. The first two are Dave Shewchun and Roland Knight. They were contest winners from The Color Computer Magazine with a game called Bugs. (They also wrote several other programs, including PenPal). I recently came across that program, and I need help with it.

The third person I want to locate is Roger S. Young, who wrote a shareware chess-and-checkers program about five years ago. I gave a copy to somebody and

they tried to send money to him as requested, but he was no longer at the address given with his program.

The fourth person is author of Chess-D. I don't know who he/she is, but I need some help patching the program to work with the Color Computer 3. Finally I'd like to contact the author of VOX Chess, but I don't know who wrote it or where he lives.

I don't have a modem, so I can't check for these people on Delphi. Any help would be greatly appreciated.

Carey Bloodworth  
 1601 N. Hills Boulevard  
 Van Buren, AR 72956

## Software Unification

## Editor:

I, like many others, was a CoCo fanatic during the early and middle 1980s. My father owned a CoCo 1, two disk drives and a printer. I bought a CoCo 3 back when it was a deal to get them for \$179.95. When I went away to college, my interest waned, and I ended up purchasing an MS-DOS compatible.

What I want to address is the subject Mr. Wilcox addressed in his letter in the December 1991 issue. I am relying on my experience with both the CoCo and MS-DOS

worlds. In my opinion it is good that the systems inheriting the title "CoCo IV" run OS-9/68000, and I am glad to see that the producers of these computers are aiming for the CoCo market. I also think software producers in the CoCo market who decide to develop products for one of these machines would do well to set up the software so it works with all the machines. This does not seem too difficult, and in the long run could save the community if it does fracture.

Despite the many different MS-DOS computers with their miscellaneous options, printers and chips, most MS-DOS software runs on most of them. Further, the user can customize a program for his computer simply by running an installation program that asks him what equipment he has. This saves time for the user and is convenient.

I contrast this with my recent experiences playing around with Tandy software for the CoCo 3. Our system is set up for OS-9 Level II and double-sided disks. When I attempted to work with Multi-Vue, I had to either copy files one at a time from single-sided disks to double-sided (for which I have no time) or format single-sided disks and attempt to run the program

(which still failed to work). I have given up frustration. The ability to enter `install` and have the software set itself up would have made life much easier.

I also want to emphasize the importance of hard drives — they are quick, convenient, and of great use. The manufacturers of the System IV, the MM/1 and the Tomcat should take note of this; few users would mind paying a couple extra hundred dollars for a system with a hard drive.

At any rate, I hope I have contributed to the discourse. If the CoCo community is going to survive, a serious approach will have to be taken to making software easy to use for everyone, not just the typical CoCo hacker. And these companies will have to advertise in THE RAINBOW — not just when their system is being reviewed but constantly. They need to make a real effort to sell these systems and keep the software coming.

So I agree with you that there is no one replacement for the CoCo. But at the same time, there must be unification in more than just new options. Good luck.

*John Perry III  
Marymount University  
Box #480  
Arlington, VA 22207-4299*

*We agree. The points you make regarding the installation of applications software hold true not only for the newer computers, but for existing CoCos as well.*

#### Picking and Choosing

*Editor:*

I was interested in your reviews of the new computers offered as a way to go for CoCo users. It's early for judgments, of course, but at first reading the TC9 seems to be the machine for home/hobby users like myself and, perhaps, for a large majority of readers out there. The implication that we may be able to continue to use our precious Color Computer BASIC programs and peripherals on the foreshadowed "virtual machine" is the sort of morale booster we needed — so much so that I have decided to wait and see, and delay going the MS-DOS route (as I was seriously thinking of doing).

I guess THE RAINBOW will eventually be faced with the unenviable task of selecting a running mate for the CoCo. I am sure that you will give due weight to the issue of CoCo compatibility — both software and hardware — before you make a decision.

For us out in the 220/240-volt, 50-hertz belt, the question remains as to whether there will be a version available for us. I'm sure many of us would like to hear from Frank Hogg on this point.

*Keiran Kenny  
115 Milson Road  
Cremorne, NSW 2090  
Australia*

*THE RAINBOW staff is not in a position to decide for others which of the new computers is the best to have. We can, however, listen to what others have to say and direct our content appropriately. We have received very little mail offering thoughts and opinions from those who have actually purchased one of the new machines. If people are buying the computers, we'd like to hear from them regarding their (dis)satisfaction with their purchases. In any case, we have forwarded your letter to Frank Hogg. Perhaps he can shed some light on the 110-versus 220-volt issue.*

#### Kudos for Rick Cooper

*Editor:*

I believe that when one of RAINBOW's advertisers provides his customers with service above and beyond the call of duty,

he is entitled to public acknowledgment. I recently ordered *All Rick's Software* (Unbelievable Offer #1) from Rick's Computer Enterprise. After receiving the package about a week later, I immediately set out to try all the programs.

I experienced some difficulty with *NIB Compressor*, which is designed to compress graphic displays so they occupy less disk space. With the source files and display programs I was using, the palette colors were always changed when loaded into the compressor. I wrote a letter to Rick Cooper asking if I did something wrong or if there was a fix. Within two weeks I had a response: He was aware of the problem, which stems from the fact that authors use different methods for storing the palette colors. He had previously tried unsuccessfully to solve the problem. After receiving my letter, he took another crack at it and came up with a partial solution. He sent me a fix that worked perfectly with *VUMaster*, a universal public-domain viewing program I use.

Subsequently I ordered Rick's *Treasure Chest* (Unbelievable Offer #3), and it too was shipped promptly. I was surprised to get a personal phone call from Rick a week later asking if I had received my order and if everything was all right. That friendly follow-up was most appreciated. Incidentally, the programs are all enjoyable, colorful and well-done. There is something for everyone.

*Norman Barson  
7 Ridge Court  
East Brunswick, NJ 08816*

#### Looking for Level II

*Editor:*

I've been trying to locate OS-9 Level II for my CoCo 3 system. Please send me any information on where I can purchase it. Can you also give me information on how to hook up a Nintendo Entertainment System to my CM-8 Color Monitor?

Thanks for all the help you have given me over the years. Before I got THE RAINBOW, I didn't know the vast capabilities of my little CoCo.

*Brandon Broyles  
4901 Wheeler Drive  
The Colony, TX 75056*

*CoCo PRO! has had several copies of OS-9 Level II in the past. You might call Dave Myers there to see if he can help. Another possible source is Tandy's Express Order line; call (800) 321-3133. We forwarded your question regarding the NES to Marty Goodman.*

#### Ham Hawks

*Editor:*

I've seen several letters in THE RAINBOW inquiring about the availability of CoCo software for amateur radio. There is a company that has advertised in *CQ/Ham Radio Magazine* amateur radio software and hardware for the CoCo. The address is: Dynamic Electronics, Box 896, Hartselle, AL 35640.

*Robert Brown  
2689 Pimlico Crescent  
Gloucester, ON K1T 2A7  
Canada*

*Thanks for the tip, Robert.*

#### A Fast Start

*Editor:*

I own a Color Computer 3 with 128K of memory, a Radio Shack disk controller and two 80-track 5½-inch disk drives. I also have a 20-Meg hard drive (an extra Seagate ST-225 hard drive from my MS-DOS computer) and want to know what I need to use

this drive with the CoCo. I do not have OS-9 Level II, but I am planning to purchase it when I purchase the 512K upgrade board. Also, where can I get a copy of the manual for the Tandy floppy-drive system? I purchased my disk controller second-hand and it didn't come with a manual.

After getting the system up to par, I plan to write programs for the CoCo. For several years I have written software for other computers and want to expand my work to include this amazing computer. I like programming in assembly language and know several processors already; the 6809 shouldn't be too difficult — my college training included the 6800 series of microprocessors. Could you print a list of the programs and books that you see as the best for a software developer? Or perhaps your readers could suggest something they "can't do without." I would greatly appreciate it. Any reader/programmer who is interested in helping me catch up on the current programming trends and techniques for the CoCo is welcome to write. I will answer all letters.

*Matthew Hudson  
P.O. Box 287  
Doran, VA 24612*

*To use a hard drive with the CoCo, you'll need a host adapter, controller, cables and device drivers. An excellent choice for the ST-225 drive is the CoCo XT interface from Burke & Burke. For more information, see "A Hard Drive for Your CoCo" (THE RAINBOW, March 1989, Page 44) by Marty Goodman.*

*At one time several assembly-language books were available for the 6809. Unfortunately these books are out of print and are pretty hard to find. Check your local libraries and used-book stores — two good books to look for are 6809 Assembly Language Programming by Lance Levanthal and TRS-80 Color Computer Assembly Language Programming by William Barden, Jr.*

#### Thicker Spreads, Anyone?

*Editor:*

Although my devotion to the CoCo has withstood the test of time, I'm still very frustrated at the lack of some needed power in the spreadsheet arena. I know of no spreadsheet software that makes full use of the 512K in my CoCo 3. Does anybody know of a CoCo spreadsheet program that provides for using more than the usual 30K or so supported by *Dynacalc* and *VIP Calc*? I'd like to be able to save large spreadsheets to DSDOS disks, so I need something that supports at least 360K of memory; this would give me a 10-fold increase in utility.

*Richard Strong  
7514 Belleplaine Drive  
Huber Heights, OH 45424-3229*

#### CoCo 2/CoCo 3 Incompatibilities

*Editor:*

I'm a relatively late comer to the world of the Color Computers — I started with a 16K ECB CoCo II in 1988. After blowing the CPU in that computer, I went to Radio Shack to get repair parts and found the CoCo 3 on sale for \$69. I bought it, thinking it would be better than repairing my old CoCo 2. I found out later that *VIP Writer*, *VIP Database* and *VIP Calc* would not work on it. I have since repaired my old CoCo, but it's a pain switching back and forth between the two. Could someone tell me how to remedy this?

I recently purchased two old 4K machines and a box of software from a friend going into the IBM business. (I am getting more and more into the world of CoCo each day.) I expanded the old CoCos and sold them at a bargain price. I also have several

CoCo 2 memory chips (8040016) and 64K RAM chips.

Ineed a pen pal to tell me what to do with all this stuff and also how to get the *Home Publisher* software to work. Any advice or correspondence is welcome.

*Terry Stafford  
Route One, Box 81-A  
Elora, TN 37328*

*One option is to contact SD Enterprises or Computer Plus to get upgraded copies of these programs. The upgrades support the 40-and 80-column text screens of the CoCo 3. The problem with the earlier versions is that their internal memory tests overwrite some vectors at the top of the CoCo 3's memory. To patch VIP Writer, use a disk zap program to change the value at offset \$6817 from \$FF00 to \$FE00. Perhaps other readers can offer more patches for the VIP series.*

**THE RAINBOW** welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, 9509 U.S. Hwy 42, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, enter `RAI` to get to the Rainbow Magazine Services area of the SIG. At the RAINBOW> prompt, enter `LET` to reach the LETTERS> prompt, then select Letters for Publication. Be sure to include your complete name and address.

## OSK Software!

*For MM1 and compatible computers*

### OS9 Game Pack™

The OSK version of this CoCo favorite includes FIVE fun games: Sea Battle, Minefield, KnightsBridge, Dice Poker, and CoCohello. All five feature spectacular graphics and point & click interface! Only \$47.95.

### Variations of Solitaire™

Includes FIVE solitaire card games: Pyramid, Klondike, Spider, Poker, and Canfield. All five feature beautiful graphics, and point & click interface! Just \$47.95.

Both programs require an MM1 or 100% MM1 compatible OS9-68000 computer, disk drive, OS9-68000, and a mouse/joystick.

### More OSK software coming soon!

All products carry the Rainbow Certification Seal. VISA and MasterCard orders accepted. Please add \$2.50 (U.S.) or \$5.00 (foreign) for shipping and handling to all orders. Colorado residents please add applicable sales tax. Prices subject to change without notice.

# Activities for a Rainy Day

Encouraging young children to learn how to use computers is fast becoming an important step in their education. While some children seem to be "naturals," others may not see much use in learning about computers. By connecting computers with activities children enjoy, we can often overcome this hurdle.

*Eensemey Weensey Spider* is a program that combines graphics with the music for the children's song of the same name. As the CoCo sounds the notes, the words to the tune appear onscreen, further enhancing the educational process.

This short program is designed to work on the CoCo 3. Enter the program from the listing, and save it on tape or disk before running it. Now assist your child with running *Eensemey Weensey Spider* — and encourage him to sing along with the CoCo.

Ruth E. Golias is retired and likes to write Color Computer programs that children might enjoy. She may be contacted at 2826 Pacific Coast Hwy., Torrance, CA 90505, (310) 325-1384.

**Product Review****Goodies Disk Two:  
An OS-9 Potpourri**

*Goodies Disk Two* is a collection of 11 OS-9 programs, most of which are written in BASIC09. One exception is Connect, which is written in assembly language. Documentation for the utilities is included on the disk, and instructions for printing the documentation is included in a readme file.

Connect essentially copies all data from one port to another bidirectionally in much the same fashion as a terminal program. Its purpose, according to the author, is to allow a terminal connected to one serial port to communicate with a modem on another serial port. Connect can also be used to interactively route data between a window and a serial port. A nice advantage of Connect is that it can transfer all 256 ASCII codes (extended characters included) between two devices. The CoCo version exits when you press the mouse button, and an alternate version exits when you press CTRL-\.

ImageCopy copies a 40-track DSDD (double-sided, double-density) disk to a

file on your hard drive, and vice versa. This is primarily useful for making multiple copies of a disk with one pass per disk. Since the disk to be copied is read only once, the copy process is much faster.

Label is used to print address labels on standard 1-inch continuous-feed address labels. Up to five lines can be printed on each label.

LoginB09 is a BASIC09 version of the login command, which is included with the *OS-9 Development System*. LoginB09 uses the same /dd/sys/password file.

Mail is a spin-off of the VMS mail system found on VAX systems, including Delphi. One primary difference is that Folders, which are similar to directories, are not supported by Mail. However, I doubt many people will ever need to store mail in multiple folders, so this shouldn't be a problem.

MesSel is primarily intended for Delphi users who capture Forum messages using a terminal program. MesSel begins by creating an index file of the messages. It then displays the first message in the file, or the message after the one you read last. This allows you to read new messages in multiple sessions without having to start at the beginning each time. Options available as you read each message

include saving the message, printing the message, extracting the message to a separate file, replying to the message, or deleting the message. Once you've finished reading all the messages, MesPrc is used to actually carry out the orders you gave to MesSel. MesPrc reads and processes the commands stored in the index file created by MesSel.

Setpass is used in conjunction with LoginB09 to change your password. TSMonB09 is a BASIC09 version of TSMon, a time-sharing monitor included with the *OS-9 Development System*.

UnFormat converts a formatted ASCII text file to an unformatted ASCII text file. In other words, carriage returns at the end of each line are replaced with a space, and carriage returns at the end of each paragraph are retained. For example, Dynastar stores a carriage return at the end of each line while Ved stores a carriage return only at the end of the paragraph; UnFormat allows you to easily transfer documents between Dynastar and Ved without having to manually reformat the document. (*The Warped Drive*, 54 Martindale Drive NE, Calgary, AB T3J 2V4, Canada, 403-280-8870; \$12 U.S., \$14 Cdn.)

**Corrections**

**"Building a Serial Cable"** (Sidebar, March 1992, Page 20): Because of a production oversight, we inadvertently omitted a figure showing how to construct a serial cable for computer/modem connections. While the text should be sufficient, they say a picture is worth a thousand words. The missing figure appears below.

DB25	DIN	Color	Signal
2	4	Green	Transmit Data
3	2	Red	Receive Data
6	1	Yellow	Data Set Ready
7	3	Black	Ground
8	1		Carrier Detect
20	1		Data Terminal Ready

# SUNDOG SYSTEMS

## PHOTON NEW!

Energy is everything; your home world depends on it. However, someone or something is slowly siphoning it away. As your world's champion, you must climb into the experimental Power Tank to challenge this nemesis and his minions. Your key lies with the ability to teleport solid mass. Use this to manipulate and explore the endless stronghold of the enemy, and to exploit the tree-flooding DUPES (Dense Units of Photon Energy) to destroy the menacing Plasma Droids. Be cautious, though; those DUPES can be deadly. *Photon*, a fantastic new arcade game for your Coco3, contains spectacular 320x200 resolution, 16 color graphics, ultra-smooth 60 Hz animation, and loads of real-time music and sound effects. It will send your mind racing over endless possibilities, requiring quick decisions and reactions. Quite simply, *Photon* is incredibly addictive; it will deliver hours of excitement. Will you become your world's greatest hero, or just another energy slave? Req: 128K Coco 3 and disk drive.

**\$34.95**

## GRAF 2.0 NEW! EXPRESS

GrafExpress 2.0 is a complete graphics and music programming environment. From the beginner to the accomplished professional, you can use GrafExpress to create lightning fast arcade games, graphic applications and utilities, and windowing multimedia demonstrations! The GrafExpress package includes two incredible systems. GrafExpress 1.0 works on all monitor types and offers support in 12 graphic resolutions (from 128x192 to 160x225 on a composite monitor) in an astounding 256 colors! Ever see a CoCo do that before? Both systems include standard graphics commands (CIRCLE, FILL, etc.) that blow away the competition. For example, the BOX command peaks out at over 2 MegaPixels/second; that's 300 times faster than BASIC! 256 separate sprites of up to 100x100 pixels each are supported with window clipping and high-res pixel level collision checking. The 8-octave/4-voice music synthesizer has independent envelope, waveform, and volume controls; a 7+ KHz sampling rate, and much more. Other features include text/graphics mixing, different font sizes, fast window copying and scrolling, picture save/load, easy implementation from both BASIC and assembly language, multiple screen animation, and support for 128K/512K, double speed, and the high-res joystick interface. The package also contains support programs that are worth the purchase price of GrafExpress alone! These include an introductory demo, a picture editor, a waveform editor, and an art program that supports 256 colors! GrafExpress also comes with a 50 page manual that fully explains all of its incredible features, if you do any graphics programming or simply want to see what your little CoCo is capable of, GrafExpress is a must! Req: 128K Coco 3 and disk drive.

**\$34.95**

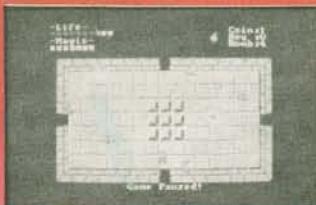

## War Monger NEW!

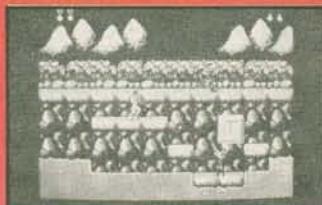

The world is in unrest. Power-hungry villains and evil warlords are readying their forces. It falls to you to lead your people against these armies, and only your best strategic plans can save the day. Fight the good fight in any era or locale. Play a simple game of capture the flag armed with water balloons; or climb into the cockpit of a 100 foot high armored warrior. Explore the deepest dungeons, defend your galaxy, or create your own scenarios with this incredible war game construction set/simulator. Your imagination is your only limit. You will deploy your forces with total control over hostile terrain while you scroll a graphic bird's-eye window over an immense world. *War Monger* has terrific 320x200 resolution, 16 color graphics and includes a tile editor to create or edit your own. Play against the computer, battle with another player, or simply watch the computer plot against itself. The enemy is everywhere. Are you ready to take on the challenge as the War Monger? Req: 128K Coco 3 and disk drive.

**\$29.95**

## The Quest for THEELDA ★ THE CONTRAS

An immensely popular 128K Coco 3 arcade/adventure. Over 500 screens of fast fantasy action and puzzle solving. Great graphics and sound effects. \$34.95. Hint book only \$4.95.

A 512K two player futuristic combat arcade game. Full screen 320x225 hardware scrolling and smooth animation. Back-ground music score and sound effects! 512K Coco3 only. \$34.95. Shipping soon!

## **CBASIC Editor/Compiler**

The ULTIMATE Color Computer

Basic Compiler!!!

If you want to write fast machine language programs but you don't want to spend the next few years trying to write them in Assembly Language, then CBASIC is the answer!!!

CBASIC is the only fully integrated Basic Compiler and program editing system available for the Color Computer. It will allow you to take full advantage of all the capabilities available in your color computer without having to spend years trying to learn assembly language programming. CBASIC allows you to create, edit and convert programs from a language you are already familiar with Extended Disk Color Basic, into fast efficient machine language programs easily and quickly.

"The most complete Editor/Compiler I have seen for the CoCo... "The RAINBOW March 1986

CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or M.L. programmer. CBASIC features well over 150 compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. CBASIC supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/PUT, PLAY and H/DRAW, all with 99% syntax compatibility.

Specify Coco 1, 2 or 3 Disk \$149.00

## **DataPack III Plus V1.1**

AUTOPilot and AUTO-LOG Processors  
X-MODEM DIRECT DISK FILE TRANSFER  
VT-100 & VT-52 TERMINAL EMULATION

- No lost data even at 2400 Baud on the Serial I/O port.
  - 8 Selectable Display Formats, 32/40/64/80 columns
  - ASCII & BINARY disk file transfer via XMODEM.
  - Directly record receive data (Data Logging).
  - VT-100 emulation for VAX, UNIX and other systems.
  - VT-100/52 cursor keys, position, PF & Alt. Kbd. keys.
  - Programmable Word Length, Parity, Stop Bits
  - Complete Full and Half Duplex operation,
  - Send full 128 character set from Keyboard.
  - Complete Editor, Insert, Delete, Change or Add.
  - 9 Variable length, Programmable Macro Key buffers.
  - Programmable Printer rates from 110 to 9600 Baud.
  - Send Files from the Buffer, Macro Key Buffers or Disk.
  - Display on Screen or Print the contents of the Buffer.
  - Freeze Display & Review information On line.
  - Built in Command Menu (Help) Display.
- Supports: Modem-Pak & Deluxe Pak or Serial Port.

Specify Coco 1, 2, 3 Disk \$49.95

## **EDT/ASM III**

EDT/ASM III is a Disk based co-resident Text Editor & Assembler. It is designed to take advantage of the new features of the COCO 3. It has 8 Display formats from 32/40/64/80 columns. The disk also contains a free standing MI Debug Monitor.

EDT/ASM III has the most powerful, easy to use Text Editor available in an Editor/Assembler package for the Color Computer.

- Local and Global string search and/or replace.
- Full Screen Line editing.
- Load and Save standard ASCII formatted files.
- Block Move & Copy, Insert, Delete, Overtype.
- Create and Edit files larger than memory.

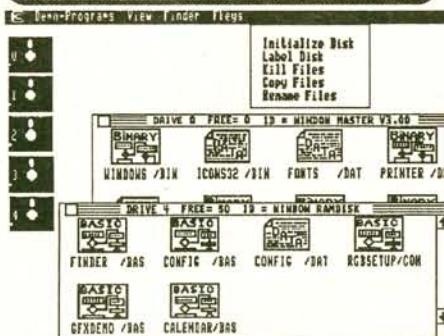

The Assembler features include:

- Conditional If/Then/Else assembly.
- Disk Library files up to 9 levels deep.
- Supports standard Motorola directives.
- Allows multiple values in FCB/FDB directives.
- Allows assembly from Buffer, Disk or both.

Specify Coco 1, 2 or 3 Disk \$59.95

## **Window Master V3.0**

The Ultimate User Friendly Point & Click operating System for your Coco 3. Simple enough even for children to use, just point and click to run programs, select files, do disk or file maintenance or almost any task you currently do by typing commands.

You also get things like a print spooler, Programmable Function Keys, a Buffered Keyboard, Ramdisk, Serial I/O port and Deluxe Pak support along with Windows, Icons, Buttons, Pull Down Menus, Edit Fields and Mouse functions all in one program. It has multiple fonts in 54 possible sizes and styles, Enhanced Basic Editing and much much more. It adds over 50 commands and Functions to Basic to fully support the Point & Click System without OS9.

..it offers so many features that it is probably underpriced. I recommend this software to all Coco3 owners." - The Rainbow February 1989

It is completely compatible with existing Basic programs and takes absolutely no memory away from basic. It requires 1 Disk Drive, R.S. hires interface & Joystick or Mouse.

Includes 128 & 512K  
Versions Only \$69.95

## **"The Source"**

The SOURCE will allow you to easily and quickly Disassemble machine language programs directly from disk and generate beautiful, Assembler Source Code. And " The Source" has all the features and functions you are looking for in a Disassembler .

- Automatic Label generation.
- Allows specifying FCB, FCC and FDB areas.
- Disassembles programs directly from Disk.
- Automatically locates addresses.
- Output listing to the Printer, Screen or both.
- Generates Assembler source directly to disk.
- Built in Hex/ASCII dump/display.
- 8 Selectable Display formats 32/40/60/80.
- Built in Disk Directory and Kill file commands.
- Menu display with single key commands.
- Written in Ultra fast machine language.

Specify Coco 1, 2 or 3 Disk \$49.95

## **Window - Ware**

**Window Writer**- A point & click Word Processor, powerful formatting capability, works with any printer. On screen Italic, bold etc. WYSIWYG..... \$59.95  
**"Window Writer is a powerful word processor that is fun to use, very user friendly..... The Environment compares favorably to that of Microsoft Windows" - RAINBOW Dec. 1989**

**Window Writer/W**- for non W/M owners..... \$79.95

**Window Basic Compiler**-similar to CBASIC....\$99.00

**Window Edit/Asm**- A full featured Assembler....\$49.95

**Font/Icon Editors**- Basic & M.L. versions..... \$19.95

**Advanced Programmers Guide**- ..... \$24.95

**The Memory game**- Concentration game ..... \$19.95

**Desk Accessory Pak**-7 resident programs ..... \$39.95

## **Deluxe Terminal V1.0**

### **A Completely New and Easy to use Terminal Program designed specifically for the Coco III.**

With advanced features you would expect to find only in a Hi-Priced MS-Dos program. It has a 26 Entry Phone Directory with complete Configuration information for Communications and Automatic logon. Supports the Serial I/O Port up to 2400 baud, Deluxe & Modem Pak and the Distri Serial I/O board up to 9600 baud. It has a Full Screen Text Editor, X/Y Modem File transfer support, Split Screen Conference Mode, Macro Keys. Full Disk Support including Multifile Copy, Kill, Rename, ArcUn-Arc and Disk Initialize and it is Completely Compatible with ADOS.

Requires 128K, Disk & 80 Col Display  
Introductory Price only \$34.95

## **Coco III Tool Kit**

### **Disk Commands**

Backup, Initialize,  
Directory, Verify,  
Compare, Search, Edit,  
Erase, Speed Test, Stop  
Rate Test, Gran Table  
Analysis & Repair

### **File Commands**

Archive, Copy, Kill,  
Rename, Erase, View,  
Edit, Print, Compare,  
Salvage, Search, Verify,  
Test Archive, Un-Archive,  
Xmodem Send/Rec.

### **The Disk Utility Program that you always dreamed of is now a Reality.**

Coco Tools is a comprehensive set of disk utilities, providing the most complete set of functions available for the standard R.S. DOS disk system. Comparable in scope and functionality to that of the famous utility available for MS-DOS computers "PC-TOOLS"!

Coco Tools is also the most Comprehensive Disk Repair program available, it automatically diagnosis and repairs file allocation errors, locates corrupt directory information and cross linked files. It provides fast and easy recovery of deleted files without the drudgery normally associated with killed file recovery.

Requires 128K, Disk and 80 col. display \$49.95

## **Christmas Specials**

### **Savings Up To 35%**

Coco III Tool Kit ..... \$39.95

EDT/ASM and The Source ..... \$89.95

CBASIC Editor/Compiler..... \$99.95

Window Master & Desk Acc Pak..... \$69.95

## Product Review

**MV Banner: Flair for all Occasions**

Using banners adds pizazz to special events — birthdays, homecomings, company parties or farewells — and your message gets across loud and clear. *MV Banner* is an easy-to-use banner-making program. If you have access to a CoCo 3 (256K minimum), OS-9 Level II, *Multi-Vue* and an 80-column monitor, then you have all

the required ingredients for *MV Banner* creations.

*MV Banner* runs in the *Multi-Vue* GShell environment. It features pull-down menus, pop-up windows, editing and saving of banner messages, two fonts, ready-to-use images, an image creator and editor, individually configurable characters, and on-screen viewing of completed banners.

The manual provides instructions for configuring the program for hard-drive use. Unfortunately the instructions for running *MV Banner* from floppy disk are sparse. I seldom use *Multi-Vue* and wasn't sure if my blunderings were stemming from misuse of it or *MV Banner*. I phoned ColorSystems

and everything was ironed out in minutes. However, I've come to the conclusion that well-written manuals teach how to use a program; sparse manuals are unclear unless you already know how to use the software.

With my questions answered, running *MV Banner* from GShell became easy. After setting the execution directory and printer-port options, clicking on the appropriate drive icon displays file icons. Clicking on the "I Love MV Banner" icon executes *MV Banner*, and clicking on the Welcome screen brings up the editing and banner-viewing screen.

In only a few minutes you can create an attractive banner — and it's easy. There are many options from which to chose: normal, bold, outlined or inverted text (white on black); Computer or Roman fonts; and use of 24 supplied graphics images or the ability to create new ones with the image editor. Combining text and graphics is simple, and the results can be saved to disk. Font support is lacking, but the many text-style options do offer variety.

Character attributes can be set in two different fashions: by default settings or by changes to the current character settings. The easiest way to enter a message is by changing default settings as each letter or image is entered. Current character settings are useful after a message has been completed and slight modifications are needed. At first I was stymied when the current character attributes wouldn't change. Then I discovered there must be an entry in the current character field before you can change its attributes. One other area caused minor dismay: The number keys and their shifted characters aren't printed when using the Roman font.

Printing results vary depending on the printer you use and the modes it supports.

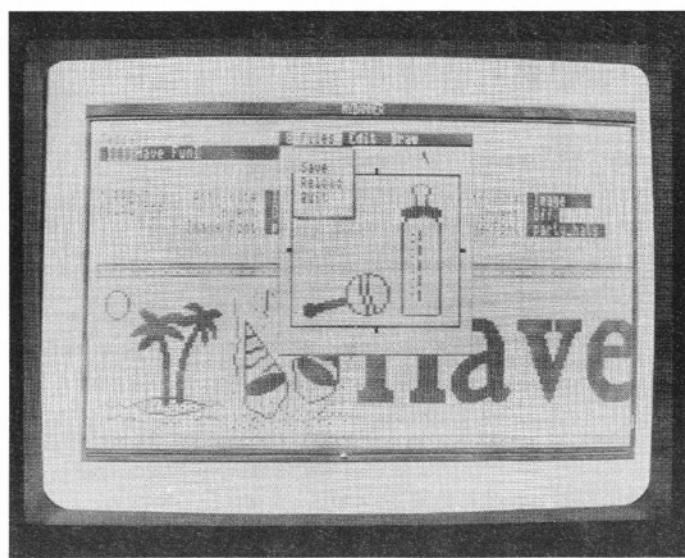

*MV Banner* supports normal, double-width, compressed and double-density modes. You can define which characters are used to print the banners. Up to four text characters can be used to obtain a solid graphics block. The printing process is quicker if your printer allows for use of a graphics block character. The manual gives advice on which text combinations or graphics blocks work best.

The maximum field length for a banner is 40 characters and/or images (40 characters handles most banner needs). By printing a banner and entering and printing another — without tearing them apart — any size banner can be created. Three modes are available for viewing banners: normal, compressed and elongated. The bottom half of the screen is used to display and scroll through banners prior to printing — this is a major plus. Imagine printing a 15-foot banner and then realizing the last character is wrong!

The *MV Banner* feature I like most of all is the one for using graphics images. Banners from programs which don't support graphics usually look very plain. The supplied images are good and cover topics ranging from holidays to parties, from baby bottles to graduation caps. Better yet, if you can't find an image to fit the occasion, just create it in the image editor. Created images can be saved to disk.

It is my hope that the manual is presented more clearly in the future. Even so, I still recommend *MV Banner*. Making banners is easy once you get the hang of it! (*ColorSystems, P.O. Box 540, 4616 Castle Hayne, Castle Hayne, NC 28429, 919-675-1706; \$22.*)

— Tony Olive

**BRAND NEW!!!**

Introducing A Brand New Product For The COCO 3:

**COCO FRIENDS DISK MAGAZINE**

It's part magazine, part BBS and part shareware! COCO FRIENDS DISK MAGAZINE is dedicated exclusively to those who still enjoy running their COCOS under RS DOS! This new product will rekindle the fire in your COCO computing life. Articles, programs, opinions, reviews, and more presented in a more personal way than you have ever experienced before!

Come and join your COCO friends! Get better acquainted. Share your views and reviews. See never-before-seen programs, graphics, and more! You and your COCO deserve it! We'll see that you get it!

If this sounds good to you, I invite you to investigate now. Dive in and get ready to have FUN!! Send \$6.00 (check, cash or money order) now. You'll receive the COCO FRIENDS DISK MAGAZINE STARTUP KIT. Browse this shell and give us your input with the built-in ENTRY WRITER. Make any other contribution in the nature of your original work. Send a copy back to RICK'S COMPUTER ENTERPRISE and we'll send you the next issue. (The startup kit and the first issue cost only \$6.00)

If you like what you see, become a regular subscriber at the low cost of \$30 for 6 issues. It's not for you...well that's okay, too. There's no further obligation. I think you'll agree, this is an offer you can't refuse!!

Don't put it off. Get in on the ground floor and help keep the COCO community strong!! We'll be expecting to hear from you soon!

**Outstanding OS9 Software!**

For your CoCo and OS9 Level 2

**Sink the Armada**™ Adds a new twist to the game of Battleship. Imagine playing Battleship where some missiles are duds! This point & click program includes 3-D screen objects! Windows appear with beveled edges, & buttons really move! Req. Color Computer 3 or 100% compatible w/256k, RGB monitor, disk drive, mouse/joystick, & OS9 Level 2. (Available 3/1/92) \$17.95.

**TV for OS9 Level 2**™ View a file while working on another. Pages through text files. Sizes itself to any screen or window. Req. Color Computer 3 or 100% compatible w/128k, disk drive, & OS9 Level 2. \$8.95.

**WP Shell**™ A Multi-Vue style environment from which you access any OS9 text editor, formatter, & spelling checker (that you supply). Req. Color Computer 3 or 100% compatible w/256k, disk drive, OS9 Level 2, & Windint (available with Multi-Vue). \$20.95.

**OS9 Calendar Utilities**™ Display your schedule on start up & perform routine tasks on Gcal files. Use w/Gcal, or alone. Req. Color Computer 3 or 100% compatible w/128k, disk drive, & OS9 Level 2. \$14.95.

**DeskTamer**™ A point & click desk top companion! Includes: card file, note pad, phone list/dialer & scheduling system! Req. Color Computer 3 or 100% compatible w/512k, disk drive, OS9 Level 2, & Windint. Modem req. to use phone dialer. \$34.95.

**OS9 Budget System**™ Track & analyze financial transactions & prepare reports. Req. Color Computer 3 or 100% compatible w/256k, disk drive, & OS9 Level 2. \$19.95.

**OS9 Level 2 Game Pack**™ Sea Battle, Minefield, KnightsBridge, CoCthello, & Dice Poker. Color graphics & mouse support. Req. Color Computer 3 or 100% compatible w/256k, disk drive, & OS9 Level 2. RGB monitor recommended. \$32.95.

**Variations of Solitaire**™ Pyramid, Klondike, Spider, Poker, and Canfield. Color graphics & mouse support! Req. Color Computer 3 or 100% compatible w/256k, disk drive, & mouse/joystick. \$32.95.

**High Finance**™ Financial analysis software! Req. Color Computer 3 or 100% compatible w/128k (256k+ recommended), disk drive, mouse/joystick, & OS9 Level 2 w/Windint. \$24.95.

**MV Banner**™ Multi-Vue banner program! Req. Color Computer 3 or 100% compatible w/256k, OS9 Level 2, disk drive, Multi-Vue, 80 col. monitor, & mouse/joystick. \$18.95.

**Send for free catalog!**

All products carry the Rainbow Certification Seal. VISA and MasterCard orders accepted. Please add \$2.50 (U.S.) or \$5.00 (foreign) for shipping and handling. Colorado residents please add applicable sales tax. Prices subject to change without notice.

# CoCo 3 Sees Stars

**D**riving a star with more than five points is pretty difficult — and sketching a respectable five-pointed star is even a challenge. *Varistar* draws perfect multi-pointed stars on the CoCo 3's HSCREEN2.

After you run the program, you are asked for the number of points to use. You may enter any number from 4 to 36 as long as the number you enter is a factor of 360 (there are 360 degrees in a circle). Factors of 360 in this range are 4, 5, 6, 8, 9, 10, 12, 15, 18, 20, 24, 30 and 36. Any other numbers are rejected (Line 70).

The trigonometry functions in the first loop (lines 100-130)

establish the horizontal and vertical coordinates for points

around the circumference of an imaginary circle of radius 95. These locations become the points on the finished star. Lines 150 through 190 set

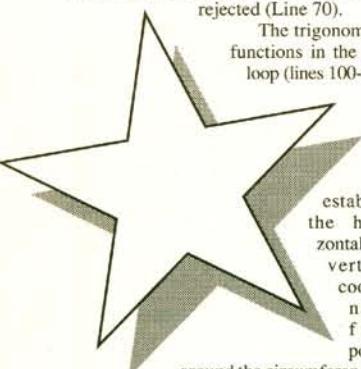

a second set of points on a circle of radius 47. Finally the loop from Line 190 to 220 draws lines connecting the points on the two circles.

It isn't necessary to set the points on-screen, but I decided to have *Varistar* do this to help you better understand what is happening. For a more comprehensive discussion on the trigonometry of stars, see "A Perfect Star" (THE RAINBOW, March 1990, Page 92) by Steve Ostrom.

*Varistar* requires a CoCo 3 and uses the high-speed poke (Line 10). Make sure the computer is at low speed (POKE 65496,0) before saving the program to tape or disk. *Varistar* does this for you if you press BREAK while the program is running (Line 20). Users without RGB monitors should change RGB in Line 260 to CMP.

While drawing stars may seem like a waste of a perfectly good computer, *Varistar* provides a concrete illustration of trig concepts, which is very important for beginning students. Once you dissect the math involved, you can also use the formulas for drawing stars in other programs.

*Keiran Kenny's interests lie mainly with the Color Computer's graphics and math capabilities. But in Keiran's own words, "I like to try everything." He may be contacted at 11/5 Milson Road, Cremorne, NSW 2090, Australia.*

## Feature Program

# EZDASM: Tear Into Memory

**M**any newer CoCo users are beginning to dabble with assembly language, yet they have had trouble locating an assembler. William Barden, Jr., helped solve this with his EZASM program (THE RAINBOW, April and May 1991 issues). To take machine-language programs in the other direction, however, I wrote EZDASM. EZDASM is an easy-to-use disassembler, a program that produces an assembly-language source-type listing in ASCII format from an assembled machine-language program.

Using a disassembler allows you to see how other programmers write, and gives you many hints and tips for your own programs. Once you gain a bit of experience with machine language, a disassembler helps you alter programs for your own needs. But you don't have to be a programmer to find EZDASM a useful addition to your library. Furthermore, EZDASM's system requirements are minimal — it works with 16K Extended BASIC, any TV or monitor, and a disk drive or cassette recorder. The program is designed to work with the 32-column screen.

To get EZDASM running, first enter the program shown in Listing 1, then save it and run it. This program builds the ma-

chine-language disassembler program from DATA statements. EZDASM checks the data while it runs; if you make any typing errors, the program will let you know. When the program has finished poking data, you are prompted for whether you want the disassembler saved to disk or cassette; press D or C accordingly.

Once the machine-language version has been saved to tape or disk, you can load it and begin to explore other machine-language programs. Before loading EZDASM, however, make sure the binary program you want to examine is already in memory (load it if necessary) and that you know its starting address. Of course you don't have to use EZDASM to look at programs only; you can use it to examine the contents of any memory location in the CoCo.

If you are using a disk-based system, EZDASM is saved with a load address of \$0000 — you must use an offset to load it into whatever area of memory you want. For example, to load EZDASM starting at \$7000, you would enter the following lines:

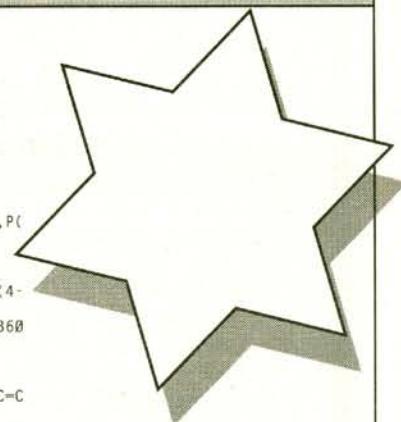

```
CLEAR 200, &H6999
LOAD "EZDASM", &H7000
```

Make sure you use an offset that will load

## Put away that pile of floppy disks and speed up your work!

Put virtually every file you own at your fingertips with the new CoCoPRO!/Ken-Ton 65-meg SCSI harddrive! Featuring a fast 28ms drive, this unique system gives you up to 255 35-track drives of RSDOS storage (compatible with virtually all ML & BASIC software!), along with MEGS of OS-9 storage! With its Autoexec feature, you can easily auto-boot any file...even auto-boot OS-9 upon startup! Comes completely formatted and ready-to-run...and, since it is in imbedded SCSI drive, you can even take the drive with you should you move to a TC-70 or MM/1! Choose 10, 50, 100, or 255 RSDOS drive setup when ordering, and we'll format the rest for OS-9. Req. MPI, Slotpak, or Y-cable, and a floppy controller with 28-pin ROM socket (such as Disto or FD-502). Those with 24-pin ROM sockets (FD-500, 501, etc.) add \$10.

## Feature Program

# Multi-column Directories Get Easier

As with most projects, there is usually more than one way to achieve a goal with a computer. To get the Color Computer to list disk directories in two columns ordinarily requires a bit of programming: The program first has to read the directory track. Then it must sort through the data and display it in a useful format. With the CoCo 3, there is an easy shortcut. Using the 40-column mode and two simple pokes, we can fool the computer into listing directories in two or more columns.

Memory Location 153 (\$99) in the CoCo 3 contains the field width for use with the comma separator. The value in this location tells the computer how much space to put between data separated by commas in PRINT-type statements — it works much like tab zones on a typewriter. Normally this value is set to 16, which is half the width of the 32-column screen. Since a disk-directory entry takes up 19 characters plus a carriage return, we'll use POKE 153, 20 to set the field width to 20 spaces, half the width of the 40-column screen.

If you use these pokes with an 80-column screen, the directory listing appears in four columns. This happens because 80 is evenly divisible by 20.

Summarizing what we have learned, to see a two-column directory on the CoCo 3, enter the following command line:

```
WIDTH 40: POKE 153, 20: POKE 47
449, 32: DIR
```

The directory listing will appear in two columns. To get back to normal operation, you must immediately change the altered carriage-return character back by poking its original value into location 47449. Do this by entering POKE 47449, 13. It isn't necessary that you change the field width back unless you have another reason to do so.

If you use these pokes with an 80-column screen, the directory listing appears in four columns. This happens because 80 is evenly divisible by 20.

Entering these pokes at the OK prompt every time you want to see a directory listing can be a waste of time and effort.

However, using them in a program can really make the CoCo 3 shine. The listing shown here, SHORTCUT, is a simple launcher for BASIC programs. At the same time, it shows how you can use these pokes in a program.

When you run SHORTCUT, answer the prompt for which drive. Then you may enter a filename for a BASIC program, which will be executed, or a question mark to see

the disk directory. To run the program on an 80-column screen, simply change WIDTH 40 in Line 10 to WIDTH 80.

*John A. Coldwell may be contacted at McInnes Island Lightstation, c/o Bag 3670, Prince Rupert, BC V8J 3R1, Canada.*

### Disk Tutorial/Utilities/Games

#### DISK TUTOR Ver 1.1

Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

#### 3 UTILITIES

A copy verify, copy, and DOS utility.

#### 2 GAMES

We will select 2 games from our stock. These are sold for more than \$20 each.

Do not mistake this software with cheap "Public Domain" software which others offer. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.

only \$27.95  
(or even better)  
only \$6.95 with  
any Disk Drive Purchase!

**512K Upgrade**  
Again at a popular price. Fully assembled and tested before shipping. Easy to install. Uses last 120 ns chips.

**SALE \$79.**  
Now includes memory test, Ram Disk Lighting, Printer Lighting, and Back up Lighting. All with an upgraded manual exclusive with OWL!

Our prices include a discount for cash but do not include shipping.

OWL-WARE has a liberal warranty policy. During the warranty period we will repair or replace at our option at no cost to the buyer except for shipping costs. Call our tech number for return. Return of non-defective or unauthorized returns are subject to a service charge.

OWL-WARE  
P.O. BOX 116  
Mertztown, PA 19539

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 7 years experience in the CoCo disk drive market! We are able to provide support when you have a problem.

Drives 1 Year Warranty

CoCo  
Consultations

### Index-Pulse Problems

**Q** I have an FD-502 whose drives are good (they work properly with an old FD-500 controller) but whose controller has a formatting problem. Although it reads and writes properly, any attempt to format a disk is met by failure.

Brian Schubring (THESCHU)  
Bloomingdale, Illinois

**A** Because the index pulse is used only while formatting disks (it is not used when reading or writing sectors on a formatted disk), I suspect your problem is related to the index pulse. The index pulse is carried by Pin 8 of the 34-pin cable between the disk drives and the controller. From Pin 8 on the card-edge connector, it goes to Pin 24 of the 1773 floppy-disk controller chip. Between the connector and the 1773 chip the signal is pulled high via a 4.7K-ohm pull-up resistor, one side of which is the index pulse and the other side of which is +5 volts. Check this part of the circuit very carefully on the disk controller board. Likely as not, you will find this line accidentally grounded (perhaps a solder bridge somewhere) or find the pull-up resistor not properly connected.

### Microscience Information

**Q** I have a Microscience hard drive but no documentation for its jumpers. I want to add a second hard drive as Drive 1 (second physical hard drive). Do you have

any information on Microscience drive select jumpers?

Andrew Thibdeau (THIBDEAU)  
Lewiston, Maine

**A** No, I don't have the specs for Microscience hard drives. However, I do have information on how to set drive selection for almost any ST-506 hard drive. Virtually all ST-506 hard drives come delivered properly jumpered for Drive 0. Keep the drives jumpered this way. If you want to put two drives on the same controller, just make a special cable as follows.

Crimp a 34-pin dual-row connector to one end of a 34-pin ribbon cable. This is the side that will go to your controller. At an appropriate distance for your setup, crimp a 34-pin female edge connector to the cable. This will of course be the connector for the first hard drive. Beyond this point, again at an appropriate distance for your setup, you must customize the end of the cable. Look at the side of the ribbon cable that does not have the red or blue stripe. This is the Pin 34 side. Count five wires from this side, then put a nick in the plastic between the fifth and sixth wires from the Pin 34 end. Count another five wires and put another nick in the plastic. Peel back a few inches of the five-wire segment, starting with the sixth wire from the Pin 34 end and ending with the tenth wire. Put a half twist in this segment. Now reinsert this segment back in the cable, and carefully crimp on another 34-pin connector. What you have done is made a special two-connector cable that has a five-wire segment with a half twist in it. Now hook the second hard drive to this second connector and, of course, hook the 20-pin connector on the drive to the 20-pin connector on your controller board. If all your hard drives are jumpered as Drive 0, this special cable will force the drive con-

nected to the second connector to be Drive 1. Note that this arrangement is similar to the one IBM uses to select drives A and B, though the position and size of the twisted cable in this case is very different. The advantage of this approach is that you never need to know what the jumpers on your hard drive do in order to add Drive 0 and Drive 1.

### Backing up Damaged Disks

**Q** I have a disk with text files which I cannot back up using the BACKUP command. The process just stops at some point with an I/O Error. But I find I can read most of the files on this disk with a word processor. What is going on here? How can I copy this disk?

Alain Pilon (ALPILON)  
Brossard, Quebec  
Canada

**A** It seems that one or more sectors on that disk are damaged, and that these are not the critical sectors containing the directory or file allocation table. So, format another disk, then copy each file from the damaged disk. If you are lucky, you will be able to copy all files to the back-up disk. If that is the case, it means that the damaged sector is one that is not assigned to any of your files. If you are not that lucky, you will likely find that only one file fails to copy (the copy process for that file will fail with an I/O Error). Still, you will likely be able to copy most, if not all, of the files on that disk. After copying all the files you can, do not use the suspect disk. Since one sector went bad, it is possible the media itself is defective. Disks are cheap enough that you can probably afford to discard the suspect disk and start with fresh disks after copying all files you can. If the file you can't copy is critical, a disk zapper and knowledge of Disk BASIC file structure will likely allow you to save most of the damaged file. CerComp produces an excellent set of utilities called CoCo Tools that can help you with this and other disk-related problems.

### Using SIMMs for Memory Upgrades

**Q** Given the low price on 256K-by-8 and 256K-by-9 SIMMs, might it not make sense to design a 512K board for the CoCo 3 that used them instead of 256K-by-1 DIP chips?

Bob Williams (BAWILLIAMS)  
Cedar Hill, Montana

**A** It is true that electronically there is nothing to prevent the use of 256K-by-8 or 256K-by-9 SIMMs for a 512K or 1-Meg upgrade board. It is also true that the prices, especially on used SIMMs, is extremely low (in the vicinity of \$5 or so per SIMM). Indeed, Frank Hogg's Tomcat uses SIPP (identical to SIMMs except for using pins instead of an edge connector) for its 512K and 1-Meg memory options. However, there is a substantial development cost in designing a new memory board for the CoCo, involving cost of layout and photo masters. This cost has already been amortized with the older 512K boards that use DIP chips, so they are available very economically at around \$25 or so per board with no memory installed. Further, used 256K-by-1 chips are virtually as inexpensive on a per-bit basis as are used SIMM's. I've seen prices of 65 cents and less per chip for 41256-12 chips from surplus chip vendors. Thus, while 256K SIMMs would work, if you look closely, they offer too small a cost advantage over 256K DIP chips to justify the cost in time and money of laying out a different style memory board, especially in the case of the usual 512K boards. If 1- and 2-Meg CoCo upgrades had been

more popular, we might well have seen use of 256K SIMMs or SIPP in order to save physical space, given the number of 256K chips required for those memory upgrades.

### Where is Extended BASIC

**Q** What are the addresses I need to save Extended Color BASIC to a disk or tape file?

Mike Nelson (MICHAELJN)  
Lancaster, Pennsylvania

**A** Extended Color BASIC occupies the ROM area from \$8000 through \$9FFF. Thus, to save Extended Color BASIC to tape, enter CSAVE "EXBASIC", &H8000, &H9FFF, &HA027. (Use SAVEM if you are saving to disk.) Note that the file you create has five bytes at the beginning and five bytes at the end that tell BASIC where to load the file in memory and where to start executing it. In this case I had you specify \$A027 as the execution address, which would result in a harmless warm start if execution was attempted. If you transfer this file to another type of computer for manipulation, you'd have to trim the first and last five bytes of the file to get a pure image of the Extended BASIC ROM.

### Unghosting for Y Cables

**Q** I have a friend who wants to use a Burke and Burke hard-drive interface on a Y cable with a Tandy disk controller. He has already arranged to supply the power to the Burke and Burke controller via a separate power supply, but he is having problems because attempts by the Burke and Burke software to talk to the controller in the \$FF50 through \$FF5F address range result in the Tandy floppy controller being triggered. I understand that a simple modification to the Tandy controller can fix this problem.

Mike Dalene (MDALENE)  
Winsted, Connecticut

**A** What an odd coincidence. I just finished writing an article for THE RAINBOW that answers your question (March 1992, Page 8). In summary, the problem is that all Radio Shack (and most other) floppy-disk controllers use addresses in the range of \$FF40 through \$FF4F, but do not fully decode the special \*SCS address line. For this reason they also respond in the \$FF50 through \$FF5F range. This naturally causes problems when used on a Y cable with a Burke and Burke hard-drive system.

The solution consists of ORing the \*SCS line with the A4 address line on the disk controller, then sending the result of the logically ORed \*SCS and A4 lines to where the \*SCS line used to go. This can be accomplished with a 74LS02 chip, which has four two-input OR gates. You use only one of these four gates, so tie the inputs of the unused three gates high, leaving the outputs of the unused gates not connected. As a construction trick, I suggest mounting the 74LS02 chip piggyback on top of another 14-pin TTL logic chip on the disk controller, with its power pins down (supplying power to the chip and mechanically mounting it) and all other pins bent up.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of THE RAINBOW's CoCo SIG. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

## Deluxe Terminal VI.0

### A Completely New and Easy to use Terminal Program designed specifically for the CoCo III.

With advanced features you would expect to find only in Hi-Priced MS-Dos programs. It has a 26 Entry Phone Directory with complete Configuration information for Communications and Automatic Logon. It supports the Serial I/O port up to 2400 baud, Deluxe & Modem Pak and the Disto Serial I/O board up to 9600 baud. It has a Full Screen Text Editor, X/Y Modem and ASCII file transfer support, Split Screen Conference Mode, Programmable Macro Keys, Full Disk Support including Multifile Copy, Kill, Rename, Archive, Un-Archive and Disk Initialize and it is completely compatible with ADOS. It allows complete customization of Display Colors, Printer & Serial Communications, Drive Step Rates and Directory Sorting preference. It requires a 128K Coco III, 1 Disk drive and an 80 Column display. Special Introductory price of \$34.95

Received and  
Certified

The following products have recently been received by THE RAINBOW, examined by our staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

**1991 CoCo Federal Tax**, a federal income tax software package that allows you to produce fully formatted tax returns on your printer — ready to file with the Internal Revenue Service. It covers Form 1040 and schedules A, B, C, D, E, EIC and SE. It also handles Forms 2106, 2441, 8615 and three separate 4562s. Runs on a 64K CoCo 1, 2 or 3 system with a disk drive. *Puritas Springs Software, 17140 Lorain Avenue, Cleveland, OH 44111, (216) 251-8085; \$39.95.*

**CF83-7**, a Controlled Reference Words Set for the *CF83 Forth System*. Requires *CF83 Forth*, also available from BDS Software. *BDS Software, P.O. Box 485, Glenview, IL 60025-0485, (708) 988-1656; \$11 for the program and a four-page printed manual, \$10 for the program with a manual supplied on disk.*

**CoCo Cassette #112**, a variety of programs presented monthly for the CoCo 1, 2 and 3. This issue contains *Bowlers' Helper*, which keeps stats for 40 teams with up to six bowlers per team; *Pool Player*, a joystick-driven pool game for one or two players; *Music Man*, a music program; *Guest List*, helps organize your guest list (data can be saved to disk or tape and printed); *Serpent*, a game featuring a hungry snake; *Forward*

*Dice*, a game of luck; *CoCo Tools*, a program to help with repetitive tasks such as viewing directories, copying or formatting disks, killing, copying and renaming files; *Pakfix*, help for those having problems getting their CoCo 3 to work with a modem; *Gnome Quest*, a CoCo 3 graphics adventure; and *Birds*, a Tom Mix machine-language graphics game. *T & D Software, 2490 Miles Standish Drive, Holland, MI 49424, (616) 399-9468; \$8.*

**Desk Tamer**, a point-and-click integrated software package. It includes a text editor, a calculator, a phone book and a filing system. *Desk Tamer* also includes a full-featured scheduling system to keep track of appointments and activities. Requires a 512K CoCo 3, OS-9 Level II, the *windint* module from *Multi-Vue*, the *tmd* module (available with *Desk Tamer*), and the enhanced *9fx2* module (created with the public-domain patch by Kevin Darling and available from information services or MV Systems), a disk drive and a mouse or joystick. *MV Systems, P.O. Box 818, Arvada, CO 80001-0818, (303) 420-7777; \$34.95 plus \$2.50 S/H U.S., \$5 foreign.*

**Photon**, an arcade/action game for the CoCo 3. Features 62 challenging rooms through which you must maneuver a power tank. You must move to avoid Dupes and Plasma Droids, and rearrange the different shaped building blocks to reach strategically placed transporters. Contains 320-by-200-pixel 16-color animated graphics along with real-time music and sound effects. For one or two players. Requires a CoCo 3 and a disk drive. *Sundog Systems, P.O. Box 766, Manassas, VA 22111, (703) 330-8989; \$34.95 plus \$2.50 S/H for U.S. or Cdn., \$5 foreign.*

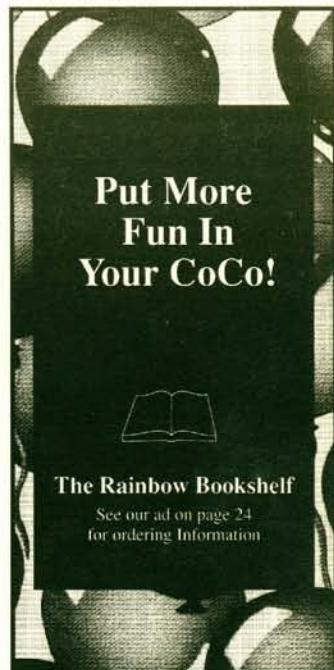

**VED/68000**, a full-featured text editor for the OS-9/68000 environment. *VED/68000* features automatic buffer sizing and online help, and allows you to modify the environment for just about any OSK machine. It supports full-screen editing, global commands, block functions, macros, print formatting and environment functions. Includes *VSplit*, a utility to break extra large files into smaller segments. Requires OS-9/68000. *Bob van der Poel Software, P.O. Box 57, Wynndell, BC V0B 2N0, Canada, (604) 866-5772; or P.O. Box 355, Porthill, ID 83853-0355; \$39.95 plus \$3 S/H.*

*The Rainbow Seal of Certification is open to all manufacturers of products applicable to the Tandy Color Computer, regardless of whether or not those companies advertise in THE RAINBOW. By awarding the Seal, we certify the product exists — we have a sample copy and have examined it. However, this does not constitute any guarantee of satisfaction. As soon as possible, these products will be forwarded to reviewers for evaluation.*

**Spreadsheet** continued from Page 1

which lends itself to a "strictly columns" format, I decided to use a boxed header (like I used in the aforementioned article). Look at Figure 1 to see how the screen should look.

A	B	C	D	E	F	G	H	I
GOLFER	GOLFER	NAME	DATE	COURSE	COURSE	GROSS	DIFF.	BEST
NAME	NUMBER	NO.		PLAYED	RATING	SCORE		10
E	10			8	6	8	8	7
								5

**Figure 1: Column Widths for Golf Handicapper**

Included in Figure 1 are the widths I used for each column. These widths are fairly simple to set. Use the arrow keys to position the cursor in the first column (*Dynacalc* calls this Column A) and type /AW. This command is used to alter the width attribute. The prompt CW? appears onscreen, asking if you want to change the width of the current column or the entire window. Press C for column and the screen shows **Width is:** D. The D (which stands for Default) is nine spaces. Since 10 spaces is the required width for the first column, Type 10 and press ENTER. Follow a similar procedure for columns B through I; for now, use the column widths I specify — you may later change them to your liking.

Now it is time to enter the column headings. Position the cursor in Cell A2 (Column A, Row 2) and type GOLFER, as shown in Figure 1. You can use leading spaces to center the heading. After you type GOLFER, don't press ENTER — press the down arrow instead. This is one of *Dynacalc*'s shortcuts; when you have an "open" entry for a cell and you press an arrow key, *Dynacalc* automatically enters the contents into the current cell, then moves in the specified direction. This means you don't have to press ENTER and an arrow key every time. Enter NAME into Cell A3 and continue, placing the indicated labels in the appropriate cells.

You can spice up the display a bit, like I did, by adding borders. To do this, I used

*Dynacalc*'s replicate feature (though its label-entry mode works well, too). Position the cursor in Cell A1, press the equals sign (=) 10 times, then press ENTER. Type /R to initiate the replicate command, and the computer displays Rep-Source Range? onscreen. Either press ENTER by itself or

To enter a formula or mathematical expression into a cell, you must use a designator as the first character. If the expression involves only simple arithmetic, use the plus sign (+). However, to use a built-in math function, start the expression with an @ sign. When you press ENTER to place an expression into a cell, the results may or may not be calculated and displayed, depending on how you have set up *Dynacalc*. (Is the automatic recalculation mode turned on?) It is important to remember that the displayed contents of any cell that contains an expression are the *result* of that formula, not the expression itself.

O.K., let's continue with our template. Since we want to be able to display our last 20 games onscreen, we need to put the numbers from 1 to 20 in rows 5 through 24 of Column C. (Remember, we used the first four rows for the headings). Move to Cell C5, type 1 and press the down arrow. In Cell C6, type 2 and press the down arrow. Continue this process until you have put the value 20 in Cell C24.

Now let's enter the expression to calculate the differential. Move to Cell H5 and enter +G5-F5. This expression subtracts the course rating (Cell F5) from the gross score (Cell G5). Use the replicate command to copy this expression to cells H6 through H24. Keep the cursor on Cell H5 and type /R. Now press ENTER or type H5 and press ENTER. When *Dynacalc* asks for the destination, type H6-H24 and press ENTER. (The period is very important as it separates the first destination cell from the last, defining the range of cells into which you want to copy the expression.) *Dynacalc* next asks whether you want the contents copied exactly (Same) or Relative. Press R for relative; *Dynacalc* will copy the expression and alter the cell addresses involved each time. This keeps you from getting +G5-F5 in all the cells. In other words, the differential will accurately reflect the data unique to each spreadsheet row.

To get the average differential, first move the cursor to Cell G26 and enter AVERAGE DIFF:. Then move the cursor to Cell I26 and enter the formula @SUM(H5..H14)/10. This adds the best 10 scores (assuming you sort them first) and divides by the number of scores to get the average. Move to Cell

type A1 and press ENTER. The screen now shows Rep-Source Range? A1...A1 Dest Range?. Press the period key, then type 11 and press ENTER. This copies the contents of Cell A1 to all cells from A1 to I1. Move to Row 4 and repeat the procedure.

At this point, it is a good idea to save your work so far. Type /SS and *Dynacalc* prompts with FILE?. We'll use the filename FORMAT; just type this name and press ENTER. If a file with this name already exists, you'll be asked if you want to delete the old file; respond accordingly. To load a previously saved spreadsheet file or template, type /SL and press ENTER. Enter the desired filename and press ENTER when prompted.

Before going further, let's take a quick look at how *Dynacalc* (and most other spreadsheets) handles the text and values we enter. There are three types of legal data: label (denoted by L), value (V) and expression (E). A label is pretty much what it says: text used to create a heading or convey some instruction or explanation to the user. Any time you start an entry with an alphabetic or other text character, *Dynacalc* assumes you want to put a *label* in the current cell.

If you press a number key as the first character in an entry, *Dynacalc* assumes you want a numeric *value* (or constant) placed in the current cell. For this reason, you must fool the program if you want to use numbers for creating borders.

G28 and enter HANDICAP:. Now move to Cell I28 and enter the formula @INT(126\*.96). This expression, which calculates the actual handicap, instructs *Dy-*

## CoCo Spreadsheets

Many electronic spreadsheets have come and gone in this market. However, several are still available. Following is a list of programs you should be able to locate and use with the Color Computer:

◆ **DeskMate** — an integrated-software package designed for OS-9. The Ledger module is useful for standard row/column manipulations but lacks many functions and features available from other entries. Reviewed April 1986, Page 198, and May 1986, Page 219. Available through Tandy Express Order (1-800-321-3133).

◆ **DeskMate 3** — similar to *Desk-Mate* but designed for OS-9 Level II and the CoCo 3. Supports 40- and 80-column screens. Reviewed December 1987, Page 129. Available through Tandy Express Order (1-800-321-3133).

◆ **Disk Spectacular** — useful for many standard row/column manipulations but lacks many functions and features supported by other spreadsheets. Available through Tandy Express Order (1-800-321-3133).

◆ **Dynacalc** (for OS-9) — a full-featured spreadsheet program that works under OS-9 Level I and Level II. Reviewed November 1985, Page 208. While the Disk BASIC version is no longer available, see its review in the September 1984 issue, Page 219. Available through Tandy Express Order (1-800-321-3133).

◆ **Elite Calc** — a full-featured spreadsheet program that supports multiple screen widths. Comes on disk or cassette. Reviewed August 1983, Page 262. Available from Elite Software, Box 11224, Pittsburgh, PA 15238, (412) 795-8492.

◆ **VIP Calc** — a full-featured spreadsheet program. Supports screen widths greater than 32 columns. Also supports embedded printer codes. Reviewed February 1985, Page 222. Also available as part of the VIP Integrated Library. The last address we know for SD Enterprises (the copyright holder) is P.O. Box 621, Carpinteria, CA 93013. However, we were unable to confirm the availability of this product at press time.

◆ **VIP Calc III** — same as *VIP Calc* except supports the CoCo 3 40- and 80-column screens. Reviewed July 1989, Page 116. The last address we know for SD Enterprises (the copyright holder) is P.O. Box 621, Carpinteria, CA 93013. However, we were unable to confirm the availability of this product at press time.

Some of these products are carried by several vendors. If you have trouble locating one of them, check the ads in THE RAINBOW. Two likely distributors of these products are CoCo PRO! and Computer Plus.

## THE RAINBOW As a Resource

The electronic spreadsheet is one of the most powerful tools ever developed for computer applications. Using one allows us to quickly manipulate numbers, perform numerous repetitive calculations and obtain results. Spreadsheets also allow us to ask "what if?" questions, giving us the ability to plan for the future.

Computer texts often define *electronic spreadsheet* using a phrase such as "emulates an accountant's worksheet." While it is true spreadsheets are extremely well-suited for business and financial tasks, their power and versatility potential takes them far beyond the confines of dollars and cents.

Electronic spreadsheets are useful in a wide variety of applications including (but certainly not limited to) statistics, structural analysis, circuit design and sports (the golf handicapper here is but one example). The various engineering disciplines involve many applications where spreadsheets can be used to great advantage. Further, in addition to being ideal for number crunching applications, spreadsheets also make handy databases. Suffice it to say, the utility of spreadsheets is limited only by our own imaginations.

Over the past 11 years, THE RAINBOW has published several articles describing spreadsheets and discussing ways they can be used. Some of the uses are perhaps a little more esoteric than others. But in sparking our inventiveness, all are equally important. Listed below are the most notable entries from the past. Where program listings are indicated, the article includes a listing you can enter to build your own spreadsheet program.

Archer, Dave; "CoCo 3 Number Cruncher;" March 1988, Page 146, program listing.

Ericson, Robert W.; "Building Spectacular Shells;" April 1983, Page 74.

Mitchell, Dennis; "Business Software and the CoCo;" March 1984, Page 28.

Moolalem, Saul; "Spreading It On a Little Thicker;" March 1988, Page 54, program updates to Bill Reed's program (see Reed's entry below).

Posner, Judd C.; "Spectacular Gives Spectacular Statistics;" February 1983, Page 10.

Reed, Bill; "Plottin' and Plannin';" April 1987, Page 184, program listing.

Spencer, Barry; "MoCalc—Mini-Calc Gets a Big Brother;" April 1984, Page 186.

Steiner, John; "Using Elite Calc to Track Automobile Expenses;" March 1984, Page 178.

Stewart, John; "The Total Figure;" February 1990, Page 26, program listing for Disk BASIC 1.1 and 2.1.

Walters, Francis M.; "Spread a Sheet for Heat Loss;" September 1990, Page 60.

White, Richard; "Bits 'n Bytes of BASIC" and "Accessible Applications;" April 1985 through January 1986. We strongly recommend you read this series of tutorial discussion of Color Computer spreadsheets and their applications.

*nacalc* to multiply the average differential by 96 percent. (The 96 percent is my handicap as defined in the USGA rules.)

We are finished with the template. Save it using a unique name; it can be used for handicapping several individual golfers.

#### Individual Entries

After loading the template file from disk, you are ready to create the first individual file. Move to Cell D5 and enter the date for the first score for an individual golfer. I use a YYMMDD format for the date (see Figure 2). This makes it much easier should you want to sort by date later.

Now move to Cell E5 and enter the initials for the course played. As shown in Figure 2 I used OH for Quail Hollow — use whatever initials you use for the courses played. Move to Cell F5 and enter the course rating as designated by the USGA. This column is right-justified. (Unless you specify using the format command, all cells containing numeric data are right-justified.) Next enter the score for that game into Cell G5. When you enter the gross scores for any golfer, you must omit any values not allowed under USGA rules. For example, a Golfer with a 20 Handicap is allowed *no more than two triple-bogies*.

Continue entering data until you have all the games listed for that individual. When you reach 20 games, it is time to sort the spreadsheet so that the 10 best games appear in rows 5 through 14. Type /MA to initiate an ascending sort. When asked for the range, respond by typing G5..G24 (again, the period is important). *Dynacalc* will sort rows 5 through 24 — all cells in each row are moved accordingly. (For various reasons you may decide to sort the spreadsheet on other criteria. However, the average differential and calculated handicap are

accurate only as long as the spreadsheet is sorted like this). *Caution: Sorting the rows of the spreadsheet may change the cell addresses used in the formula in Cell I26.* Go to that cell and check the equation. If it no longer specifies cells H5 through H14 (H5...H14), edit it so that it does.

above. Of course I could enter the name and number on every line, but that would be tedious and unnecessary. If you want to compare scores for different golfers, you might fully use columns A and B.

I use the template to create a different spreadsheet file for each golfer, and each

ever row in Column C holds the data for his first game, and enter the new data. (You may notice the game numbers shown in Figure 2 are not 1 to 20; I enter new games with the next higher number, deleting the lowest game number.) Now sort the spreadsheet as indicated above.

For my own edification, I type an asterisk in the first 10 rows (for the 10 best games) of Column I. I haven't figured out a way for *Dynacalc* to do this automatically, so I simply enter the asterisks manually after each time I sort the file.

When you save a worksheet to disk, all cells in the sheet are written to disk, even if they are currently out of sight. In addition, column widths, titles, current cursor location, formats, labels, entry modes and row/column flags are saved. Each of the worksheets you save will take about two grams of disk space; if you are working with a large group of golfers, it might be best to use a separate disk for the worksheet data.

#### Getting Printed Results

A printout is the ultimate goal for the golf-league handicapper, and getting one is a simple process. (Make sure you have saved the sheet on disk before you print it.) To print the spreadsheet, type /P. You are prompted for the range to be printed. Enter A1..I28 and the printer will print hardcopy of all data between cells A1 and I28.

GOLFER NAME	GOLFER NUMBER	GAME NO.	DATE	COURSE PLAYED	COURSE RATING	GROSS	DIFF.	BEST SCORE	10
		24	901206	OH	68	86	18	*	
		28	901220	OH	68	86	18	*	
		34	910111	OH	68	86	18	*

		41	910214	OH	68	97	29		
BUD SABEL NO. 1		AVERAGE DIFF: 20.7							
		HANDICAP: 19							

Figure 2: Working Golf-Handicapping Spreadsheet

#### Finishing Touches and Operating Notes

As you will notice from Figure 2, I decided to put the golfer's name and number in Row 26. As you enter and sort different scores, all cells for the moving rows change places. Using the last row for the name allows it to remain undisturbed since Row 26 is not within the sort range given

file uses the golfer's name for its filename. As a reminder for working with the printouts, I enter the filename into columns A and B about halfway down, then I save each individual file to disk.

When a golfer plays his 21st game, you need to update his individual file. To do this, load the file from disk, move to what-

A.J. Sabel is a retired Army colonel who has a bachelor's degree in electrical engineering. He has been an amateur radio operator for over 50 years and operates under the Extra Class license KA4M. He may be contacted at 4948 South Shore Drive, New Port Richey, FL 34652.

Join us...  
for the 1st Annual "last CoCoFest"!  
**CHICAGO**  
**COCOFEST**  
**MAY 30-31, 1992**  
INLAND MEETING CENTER, WESTMONT, IL

Okay...it comes as no big secret that there are fewer folks in the CoCo Community than there used to be. There are fewer active vendors. There is less magazine coverage. But, in spite of the fact that the "big guys" wrote us off to history years ago, we're still here. And we will be for as long as we choose to be, for the CoCo Community is a rare and special breed indeed! In celebration of the unique sense of kinship that CoCo/OS9/OSk users share, we invite you to join us for what we'll affectionately call "the 1st Annual Last CoCoFest". If enough of us continue to enjoy the fun and fellowship that sets us apart from many other computer users, there will be a 2nd (and 3rd, and 4th...) annual "last CoCoFest". Only time will tell. But, just in case, we're putting every possible effort into making sure that this show is more than just a show...that it is indeed a celebration of the Community.

We won't ask you to come just out of a sense of loyalty to the Community (although, if that's what will motivate you to join us, consider yourself asked!). We'd prefer for you to come prepared to join in the fun, as we plan a non-stop CoCo party! Join us, and meet the "faces behind the names", such as **Marty Goodman**, **Kevin Darling**, and more. Meet fellow CoCoists that you've corresponded with over time, but never met face-to-face. Enjoy the hospitality of the Glenside CoCo Club. Share and learn at **informative seminars**, hosted by the **best names in the biz**. Get a chance to win one of dozens of door prizes, valued at **over \$1000**. Take in exhibits of all your favorite soft- and hardware, with live "hands-on" demos and **great show specials** from leading vendors. And, to get things off to a roaring start, join us for the **pre-fest "Party with Marty"** on Friday nite (separate admission required).

There's something to be said for saving the best for last...and that's what we plan to do with "the 1st Annual Last CoCoFest"! So join us in a show of support for the Community, enjoy a weekend of fun, frolic, and fellowship, and make us start worrying about how we can possibly top this show next year...

Tickets for the Chicago CoCoFest are available now at a special presale price of \$14 for a one-day pass, or \$17 for a two-day pass (prices at door \$3 higher). Add \$1 handling per order. For ticket ordering using VISA or MC, or for information on hotel accommodations (\$52.95+tax per nite incl. full breakfast and cocktail hour), call (313) 482-8128, or write CoCoFest, PO Box 763, Ypsilanti, MI 48197.

# Program Launcher Helps Users Get Started

**L**auncher is a BASIC program that displays an onscreen menu of all the BASIC programs on a particular disk. You can select any program that appears on the menu, and Launcher will run it for you. The program works on the CoCo 3 and requires Disk BASIC. Launcher works only with disks that store no more than 68 files.

When you run the program, it reads the

disk and prints the filenames of all BASIC programs (or any files with a .BAS extension) on that disk. The filenames are sorted before they are displayed, making it easy to find a specific program. The first filename in the list is highlighted and will be executed if you press ENTER. Use the right and left arrows, H (for Home) and E (for End) to select other files. To exit from

Launcher without launching another program, press BREAK.

As stated before, displayed filenames are sorted in ascending order. However, the sort (a simple bubble sort) slows down if there are many filenames to be sorted. The sort process can be bypassed, if you want. You can also increase its speed by using machine language or the BASIC+ REPEAT,

UNTIL and SWAP statements (THE RAINBOW, June 1991, Page 32).

I chose to use black and white on a 40-column screen to give the highest contrast and readability on any video device. The PALETTE command in Line 155 defines the background color (black), and the command in Line 160 defines the foreground color (white). You can change the colors assigned to these palettes, but don't change the palette numbers themselves.

## Yes! They're still available!

# Rainbow Back Issues

### BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users — a great way to expand your library!

### A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by

United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

**MOST ISSUES STILL AVAILABLE**  
Available issues through June 1982 are provided on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 6 percent sales tax; Canadian residents, 7 percent GST. In

order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To order, review and fill out the form below and mail it with your payment.

For greater convenience, order through the Rainbow Magazine Services area of our Delphi CoCo SIG.

#### RAINBOW INDEX

A complete index for July 1981 through June 1984, is printed in the July 1984 issue. Separate copies are available for \$2.50 plus 50¢ handling. Indexes for subsequent years are published annually in the July issues of THE RAINBOW.

**Launcher** uses HSCREEN2, the 320-by-192 pixel 16-color graphics screen. In this mode, each byte of video memory holds two pixels (four bits per pixel). Each group of four bits specifies which palette register to use when coloring the pixel.

The HGET command in Line 730 reads all the pixels in a rectangle surrounding the current filename (the "selected" filename). The HPUT statement in Line 735 creates the highlight effect. Notice the NOT operator is used to flip each bit; if a pixel is represented by Palette 15 (binary 1111), the NOT operator toggles all the bits to zero, selecting Palette 0 for the HPUT command. If you were to use Palette 1 (instead of 15) for the foreground color, the NOT operator would cause the pixel to be represented by Palette 14 (instead of 0). Keep this in mind if you want to use other HSCREENs or palette registers, or if you want to use the highlight effect in another program.

*Geoff Friesen has a bachelor of science degree in computer science and mathematics. He is the author of several published articles about computers. He may be contacted at General Delivery, Dauphin, MB R7N 2T3, Canada, (204) 638-7302.*

**PHOTON**

The critics will be raving about this strategy game! Based on an original concept by author Jeff Steidle, *Photon* is an addictive time-muncher in the spirit of *Lemmings*® and *Tetris*®. Match wits with Ludevide, the evil power droid, as you reason your way through over 60 devious levels. The numerous original music scores, digitized speech and sound effects, and pleasing animation and graphics enrich *Photon* to make it an unparalleled gaming experience. Soon to be released on a variety of computer platforms, the CoCo Community is lucky enough to be given first glance at this fantastic game! Req. 128k CoCo-3, disk drive, and joystick.

\$34.95

**50% OFF!**

Sundog Systems is blowing out selected back-stock software, and you can now take advantage of these bargains to complete your Sundog collection! For a limited time, you can buy some of the best CoCo games at 50% off retail price!! Half off factory-new game software...you'll never find a better deal!

Visa, MC, check, MO, and COD (US only, please) accepted. All foreign orders must be sent in US currency MO's. Include \$2.50 for shipping in USA &amp; Canada, \$5 foreign. \$3 extra for COD orders. CA residents add 6% tax.

**JWT Enterprises**

**Optimize Utility Set 1:** Optimize your disks by eliminating fragmented files and compacting your directories for faster file access. Running time averages one hour. Also includes a utility to assess file fragmentation and directory fragmentation as well as excess directory padding. Can work in conjunction with Burke & Burke's repack utility. Look for upcoming review in Rainbow. **\$29.95; Foreign Postage, add \$3.00**

**Optimize Utility Set 2:** Contains two programs to check the integrity of your disks. Detect and correct any directory or file structure errors. Run periodically and before any optimizations to insure the reliability of your data. Look for upcoming review in Rainbow. **\$19.95; Foreign Postage, add \$3.00**

**Optimize Utility Set Pac:** Combination of both optimize sets. Purchasers of the Optimize Utility Set 1 can upgrade for \$9.95 with proof of purchase. **\$39.95; Foreign Postage, add \$4.00**

**Nine-Times:** Each issue contains: 9 helpful and useful programs to help build your OS-9 library • Instructions, examples, and samples of Basic09 procedures and subroutines to help with your own programs and your understanding of Basic09 • C programs and programming examples • Hints, Help columns, and informative articles to advance your knowledge of OS-9 • Supplied totally of 5.25" disk • Bound manual sent to each new subscriber for help in getting Nine-Times up and running, as well as tips on using it with a ram disk or hard disk • All graphic/joystick interface for ease of use. **One Year Subscription, \$34.95; Canadian Postage, add \$1.00; Foreign Postage, add \$8.00**

**Back Issues:** Available for the May 1989 through November 1991 issues. Please write for information on Back Issue contents. **\$7.00 each; Foreign Postage, add \$2.00 each**

**Magazine Source:** Due to many inquiries, the source code for the magazine graphic presentation shell is being provided as an informational tool. Included is the actual Basic09 source code and compiled modules on disk, as well as documentation and a printed copy of the source code. **\$25.95; Foreign Postage, add \$5.00**

## Recover Trashed Text Files

*Salvage* is a short assembly-language program, written by Stephen Goldberg, that works almost exactly like the standard copy command included with OS-9. The difference between *Salvage* and copy is that copy aborts with an error message if it encounters an unreadable sector where the file is stored on disk. *Salvage*, on the other hand, ignores the bad sector and copies all readable data from the specified file to a new file. This can be very handy for recovering text files (*Salvage* will not recover executable modules), and recovering most of a document is certainly better than having to start from scratch.

The program begins execution at the label entry by decrementing the contents of Register B, which contains the length of the parameter string passed on the command line. If no parameters are found, program execution branches to syntax to print the command-line syntax of the program, which is

```
salvage <source> <destination>
```

If parameters are entered on the command line, the program clears Register D (clrA and clrB) and stores the result in the variables hioint and lopoint. The next step opens the input file for reading and creates the output file for writing. If either file cannot be opened, the program prints an error message and aborts.

The transfer loop reads one sector from the input file and writes it to the output file, incrementing seccount on each pass through the loop. This loop continues until

an error is encountered, in which case the program branches to error if it is a read error or to out (to exit the program with the error status stored in Register B) if it is a write error. The error routine branches to out if it has reached the end of the input file. Otherwise the current offset stored in hioint and lopoint is loaded into registers X and U, the F\$Seek system call is used to seek beyond the unreadable sector and program execution returns to the transfer routine.

Look closely at the variable declarations for hioint, seccount and lopoint, and the beginning of the transfer routine. The F\$Seek system call uses a four-byte offset to indicate the desired position in the file to which to seek. This four-byte offset is stored collectively in these three variables, and Stephen uses a very clever trick to keep track of this offset: At the beginning of the transfer routine, the current value of seccount is incremented by one — but seccount is handled as a 16-bit (two-byte) variable. If you could peek into memory you would see the variables stored somewhat as follows:

```
hioint      00
seccount   11
lopoint    2200
```

In this example, I am assuming that the current offset is \$00112200. When seccount is loaded via the ldd instruction, the value \$1122 is retrieved from memory. This retrieves the one-byte value representing seccount and the upper byte of lopoint. This value is then incremented to \$1123 and stored back in seccount. The four-byte offset is now represented in memory as:

```
hioint      00
seccount   11
lopoint    2300
```

which represents an offset of \$00112300. This trick saves considerable processing time by working with 16-bit values which can be represented in Register D, rather

than working with 32-bit values. To show the difference, the routine could have been written in the longer form as follows:

```
transfer ldd    lo��int
          add    #256
          std    lo��int
          bcc    xfr
          ldd    hioint
          addd   #1
          std    hioint
          xfr    leax   buffer,u
```

This routine first loads the initial value of lo��int, increments it by 256, and then stores the result back in lo��int. If the carry flag is set (meaning the value overflowed beyond \$FFFF), the value of hioint is incremented by one. The drawback to the technique used by Stephen Goldberg is that

the maximum file size is limited to \$00FFFFFF, or roughly 16 megabytes. However, I doubt many of us have files anywhere near that large, much less a need to copy them from disk to disk.

If you don't have an OS-9 assembler or subscribe to RAINBOW ONDISK, the BASIC09 program in Listing 2 (MakeSalvage.b09) can be used to create the executable version of *Salvage*.

*In addition to being OS9 Online SIGOP, Greg Law enjoys programming on all types of computers and has worked on systems ranging from the CoCo to the Burroughs B6700 super mainframe. He lives in Louisville, Kentucky.*

The next phase after entering your latest BASIC creation is that of debugging and editing the program. While BASIC's EDIT command is not the slickest editor ever designed, it's still quite powerful and functional. The EDIT command provides subcommands you can use as you revise each line; to activate a subcommand, simply press the appropriate letter. However, not all the subcommands are documented in the CoCo manual from Tandy. Following are three such commands:

A — cancels all changes made in the line being edited, relists the original line, and lets you continue editing.

Q — cancels all changes made in the line being edited and exits from the EDIT command.

E — keeps all changes and exits from the EDIT command (this is the same as pressing ENTER).

The A and Q subcommands are really helpful if you lose track of what you are doing. You can either abort the current changes and get a fresh look at the original line, or quit the editor altogether.

Many CoCo 3 owners still use TVs for their monitors. Therefore, despite the CoCo 3's enhanced capabilities, these people often use the 32-column screen for their programs. You can dress up those screens using a few simple pokes. To invert the entire screen (green characters on a black background), enter

```
POKE &H95AC,57:POKE &HFF22, PEEK (&HFF22) OR &H10
```

To activate true lowercase mode on the 32-column screen, enter

```
POKE &H95AC,57:POKE &HFF22, PEEK (&HFF22) OR &H20
```

These lines can be combined as:

```
POKE &H95AC,57:POKE &HFF22, PEEK (&HFF22) OR &H30
```

Press SHIFT-0 to toggle between upper- and lowercase characters. Within a program, you can use POKE 282,0 to select lowercase and POKE 282,255 to select uppercase.

## Product Review

### *The Printer Bible: Answers to Your Prayers*

*The Printer Bible* from Que Corporation is designed to answer all your questions about printers. Whether you are planning to purchase a new printer, need to solve problems with a printer you already own, or just want to know how printers work, this book covers most aspects of past and present printer technology.

Written by Scott Foerster, *The Printer Bible* is organized into four major sections: The Basics, Printer Setup and Management, The Publishing Challenge, and Maintenance and Troubleshooting. After giving a brief history of printers, the first section discusses such topics as how text and graphics are printed, the differences between printer fonts and styles, and the hardware and software features available. Hints and tips for getting the most from a printer appear on nearly every page.

The second section covers aspects to consider when making a purchase decision, how to install and test a printer and configuring PC applications for use with printers. Although the book does mention both Macintosh and MS-DOS (naturally) applications, it does not cover CoCo-specific topics.

The third section deals with the particulars of typesetting and the topic of PostScript printers. While much of this section is aimed at users of specific MS-DOS products, a great deal of information is provided on desktop-publishing fundamentals and laser printers. This section is an excellent resource for those who are involved with any form of publishing that involves computers. (Is there any other kind?)

In the last section, *The Printer Bible*

provides a step-by-step approach to finding and solving printer problems and includes a complete discussion of serial and parallel interfaces. Most common and some not-so-common problem areas are addressed.

Rounding out *The Printer Bible* are appendices for printer commands (included are Hewlett-Packard, Epson, ISO and DIABLO), a printer vendor list, a font-vendor list and symbol names for many printed characters. Like earlier parts of the book, these appendices are relatively extensive. It is likely most users will spend more time with them than with the rest of the book.

It is obvious *The Printer Bible* is intended mainly for users of Macintosh and MS-DOS computers. However, the information it contains is a gold mine for users of any personal computer, and it appears the author has gone to great lengths to ensure this.

Because of the broad spectrum of aspects associated with today's printer technology, this softbound 682-page book doesn't provide individual coverage of specific printers. This might seem a disadvantage to those who want specific details, but that information should come with your individual printer. On the positive side, *The Printer Bible* is written in fairly non-technical terms, making it easy to extend its contents to just about any printer. And it includes an excellent glossary of printing and publishing terms.

The world of printers is often fraught with confusion and misinformation. As a complete resource, I find *The Printer Bible* a welcome addition to my library. (Que Corporation, 11711 N. College, Carmel, IN 46032, 800-428-5331, ext. ORDR; \$24.95, \$31.95 Cdn., plus \$2.50 S/H.)

— Cray Augsburg

## star Plug 'n' Go for Your CoCo!

### star NX-1020

This CoCo compatible NX-1020 system sets new standards in color printer performance... 225 cps, 4 NLO fonts including Script, plus a high speed draft font; but the enhancements don't stop there. Add a 16k buffer, a special quiet mode, top feed, bottom and rear tractor, and the list goes on. Seven on-demand colors, 8 color graphic modes, Epson and IBM emulation for maximum software compatibility. Virtually everything desired in a printer is here — speed, color and versatility at an affordable price with a 2 year warranty.

Our Plug'n'Go for the Coco system includes:

- NX-1020 Multi Font Color Printer
  - Blue Streak Ultima
  - Software Support Disk
  - Color Graphics Utilities
- \$239.95**  
+ \$10 Shipping & Insurance

### star NX-1001

This CoCo compatible NX-1001 system is fully featured with 4 NLO plus a draft font, 10 character sizes from subscript to quadruple size, 4k buffer, 180 cps, friction and tractor feed, and much more. Backed by a 2 Year warranty. Epson and IBM emulation modes for maximum software compatibility. A performer so versatile you may never exhaust its creative possibilities!

Our Plug'n'Go for the Coco system includes:

- NX-1001 Multi Font Printer
  - Blue Streak Ultima
  - Software Support Disk
- \$188.88**  
+ \$10 Shipping & Insurance

STAR 24 WIRE PRINTER SYSTEMS ALSO AVAILABLE!  
CoCo compatible • Color and Monochrome • Call for pricing

### The Ultimate Serial to Parallel Interface! The Blue Streak Ultima

7 Switchable Baud Rates - 300 thru 19200!

- An interface cable that converts the serial output of a CoCo 1, 2 or 3 to a standard parallel format, compatible with modern parallel printers.
  - Connecting the Ultima is as easy as plugging in the cable! The four pin din plugs into the serial I/O port of your CoCo and the other end, a 36 pin connector, connects to the parallel port of the printer.
  - The Ultima is powered with the +5V supplied by most printers on pin 18. If your printer does not have +5V on pin 18 you'll need to add the power option when ordering.
- \$39.95**  
+ \$2 Shipping  
POWERED VERSION  
ADD \$6.00

# Patriot Command: Desert Warfare for All CoCos

A cool wind stirs the desert dunes as you and your soldiers settle down for a quiet evening meal. Suddenly the crewman on duty sticks his head out of the Patriot Missile command center and yells "Scuds incoming!"

You run to the command center and quickly scan the radar screen. It looks like the biggest attack so far! You wonder why the Patriots haven't launched yet and discover the Patriot guidance computer has blown a fuse — and there isn't enough time to locate a spare! Knowing you are the last line of defense, you remember your trusty CoCo joystick in your duffel bag, and you quickly wire it into the targeting system. Now it's just you against them. Are you quick enough?

*Patriot Command* is a machine-language arcade game in which you pit your reflexes against incoming missiles. The program works on any CoCo with at least 16K and Extended BASIC. (Readers with 16K Standard BASIC CoCos can load the executable program from tape as long as the file was created using an Extended BASIC Color Computer.)

To create *Patriot Command*, enter the BASIC program and carefully check it for errors. After you save the program to tape or disk as POKECOM.BAS, run it. POKECOM.BAS pokes the machine-language code into memory and saves it to tape or disk as PATCOM. The program automatically saves to disk if a disk drive is connected, so make sure you have a formatted disk in Drive 0.

To start *Patriot Command*, first connect a joystick to the left joystick port. Then insert the disk or tape that contains PATCOM and enter LOADM "PATCOM":EXEC (tape users enter CLOADM "PATCOM":EXEC). When the title screen appears, press D to see a demo or press any other key to start a game. Pressing S at any time starts a new game; pressing P pauses and unpauses the game. To return to BASIC, press BREAK.

When the game starts, you'll see your allied defenses as bases at the bottom of the screen; the scuds fall from the top. Use the left joystick to position the onscreen crosshairs on an incoming missile, and press the firebutton to launch a Patriot. Remember, it is important to "lead" your targets before firing. CoCo 3 Users Note: For an added challenge, set the computer to high speed (POKE 65497,0) after loading, but before executing, *Patriot Command*.

**Bob Kimball** is a process-control engineer working in the chemical industry. He is married and has two teenage boys. The Color Computer has been his hobby since 1985. Mr. Kimball may be contacted at #12 Spring Valley, Woodward, OK 73801. (405) 256-3901.

# Being Online Never Felt So Fine

**Free to Explore** — Discover a worldwide community on DELPHI.

Download from thousands of programs for your PC. Join groups for nearly every type of computer and many other special interests. Participate in discussions with other members in conference and message forums. Challenge your skills in lively multi-player games.

**Free to Choose** — Choose from two low-cost membership options:  
\$6 an hour or \$1 an hour with the 20/20 Advantage Plan!\*

**Free Hour** — Join DELPHI today and your first \$5.95 fee will be waived. This means you'll receive a membership and your first evening/weekend hour of use for free.

**Free to Decide** — With DELPHI there's no risk. Take an hour to explore and if you decide DELPHI is not for you, simply contact Member Services and request your account be cancelled.

\*Rates apply for evening and weekend access via Tymnet from within the mainland U.S. DELPHI's Basic Plan is \$5.95/month including the first hour of use. The 20/20 Advantage Plan is \$20 /month including the first 20 hours of use. There is also a \$19 entry fee for members who choose the 20/20 option.

*Now featuring  
"Custom Forums!"*

## **Create Your Own Online Network**

Announcing "Custom Forums" on DELPHI. Having one is like running your own personal network. As the forum host, you'll control who has access to your personal message area. Discussions can be limited to a few members or open to thousands. You can create a custom forum for your family, your business, or for any group of people sharing a common interest. Join DELPHI and start your own online network today!

## Product Review

## **OS-9 Variations of Solitaire**

Solitaire has taken over my life! I sit in front of the computer for hours playing one variation after another — usually never winning. Hundreds of hands whirl by on-screen without one hurrah, yet still I play. "Just until I win one, just until I win one" is my mantra. I wasn't this obsessive over solitaire when my parents first taught me to play the simple Klondike variation. I guess shuffling and arranging the cards was too much hassle to stay with it for long. But the computer makes it so easy to play solitaire, and I spend hours glued to the computer.

If you decide to add solitaire to your collection of vices, don't overlook Color-Systems' OS-9 *Variations of Solitaire*, which offers five versions of the addicting card game: Klondike, Pyramid, Spider, Poker and Canfield.

Klondike is a familiar friend: It's the one with the seven stacks of cards in the *tableau* (the layout) and the four *foundations* that build from aces to kings in each suit. In Klondike's tableau, you arrange the cards so they descend from high to low in alternating colors (red nine, black eight, red seven, etc.). ColorSystems makes Klon-

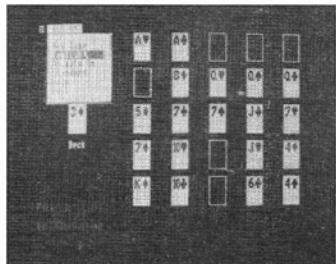

like more challenging by supporting Las Vegas rules — you're advised to pay up when you lose.

variation I found particularly addicting. The tableau is laid out in a pyramid fashion, which you must disassemble so that no cards are left in the tableau. Each card is assigned a point value (face value for cards 10 and under, 11 for jacks, 12 for queens, 13 for kings), and you take cards off the tableau in pairs that equal 13 points — a 9 with a 4, for example. If no matches can be made between one card on the tableau and any other, users can look for a possible match from the deck. Two modes are supported: one in which you go through the deck one card at a time (but only one trip through), and one in which the cards are turned three at a time. Kings, being worth 13 points, can be removed all by themselves. The "catch" with Pyramid is that only cards not covered by any in the row below are "available" to be paired: You have to work your way up, and it gets tougher as you go.

Spider deals two decks of cards onto its tableau, which is huge, 10 cards in a row. Like Klondike, a face-up card can be moved to the bottom of a different row providing its value is one lower than the card upon which it is placed. The ultimate goal is to arrange all eight suits from kings to aces and remove them from the tableau. Needless to say, I was not successful in my many

I could get really hooked on Poker, a variation in which you lay out 25 cards in a matrix of five rows and columns. Each row and column equals a "hand," and you get

points for pairs, three-of-a-kinds, straights, etc. Royal flushes, of course, give the most points — 30. A lowly pair yields one point. When playing the English system, straights (12 points) are more valuable than flushes (five points). The American system (also supported) assigns point values that more accurately reflect poker hands.

Like Klondike, in Canfield cards can be moved around the tableau, placed onto another card if it happens to be one lower in rank and of the opposite color of the card it is placed upon. This variation, like the others (except Poker), tracks the number of games won and the number of games lost, as well as a percentage of games won.

Aside from the background color scheme of red and white on black, which I disliked, the game screen is well laid out. The cards look like cards. There's a *Multi-Vue*-like pull-down menu bar across the top of the screen (though *Multi-Vue* is not required).

The only menu item on the bar is called Action: Selecting it allows you to read onscreen help and, thankfully, turn off the animation. (Animation can also be turned off with a command-line option when the program is first executed.) The cards animate by default, but they take so much time moving from one side of the screen to another, I was relieved to find a way to stop them. Without animation, the speed of play is decently quick. There is a minor problem of text in the Action menu overwriting other menu options, but it's livable. [*Editor's Note: ColorSystems reports this problem has been fixed.*]

*Variations of Solitaire's* authors designed the games after researching solitaire variations in the books *Hoyle's Rules of the Games* and *According to Hoyle*. A lot of that research shows up in the manual's informative explanation of rules and game play. You can learn a lot by reading it. But you can also learn to play just by diving in. The Action menu's help screens give you enough information to get started.

To play you'll need OS-9 Level II along with a CoCo 3 having at least 256K of memory. While the keyboard can be used to control play, I recommend a joystick or a mouse. Both RGB and composite modes are supported. (*ColorSystems*, P.O. 540, Castle Hayne, NC 28429-0540, 919-675-1706, \$34.05.)

—Lauren Willoughby

# PRINTING SIDeways Gives Professional Results

**H**ave you ever needed to print text across the length of a piece of paper (maybe you're creating a folded bulletin) but discovered 8½-by-11-inch paper won't fit into the printer sideways? Or perhaps you've just developed a spreadsheet, but it's too wide to fit across one page (and taping two pages together doesn't produce a very professional look—besides, it's a pain).

*Sideways* is a printer utility that accepts text from a standard ASCII file, rotates it, and prints it sideways down the paper instead of across. As written, *Sideways* requires a CoCo 3 and a disk drive, and it is designed to work with the Radio Shack DMP-120 printer. However, with some minor changes, *Sideways* will work with just about any dot-matrix printer that supports Tandy-mode graphics printing. (Newer Tandy printers that support only "IBM/Epson" codes won't work with the *Sideways* system.)

The reason *Sideways* requires a CoCo 3 is that the program uses the Hi-Res font built into the computer to create the rotated characters. This "limitation" is actually a bonus—the CoCo 3's built-in font can be changed, and you can use different fonts for printing. In fact you can use just about any font created with a font editor such as *Font Creator* (THE RAINBOW, May 1987, Page 99) or *Font Master* (THERAINBOW, October 1988, Page 41).

Printer Setting	POKE 150,x	
	(Normal Speed)	(High Speed)
600	88	180
1200	41	88
2400	18	41
4800	7	18
9600	1	7
19,200	N/A	1

Figure 1: Printer Rate Values

CHR\$(18)	Start graphics mode
CHR\$(30)	End graphics mode
CHR\$(27);CHR\$(19)	Select standard (10 cpi) character
CHR\$(27);CHR\$(20)	Select condensed (17 cpi) character

Figure 2: *Sideways* Control Codes

that you create by running the BASIC program shown in Listing 2. Enter and save both programs to disk. When entering Listing 1, make sure you use the correct printer speed poke in Line 90. Since the program puts the CoCo in the high-speed mode—effectively doubling the I/O rate—you must use the value that would ordinarily set the computer for half the speed at which your printer is set. For instance, if your printer is set for 9600 baud, use the poke value for 4800 baud. (Standard values are shown in Figure 1. If the value does not work, try increasing or decreasing it by one.) Now run the program in Listing 2; it pokes the object code into memory and saves BITTEST.BIN to disk.

With SIDWAYS.BAS and BITTEST.BIN on a disk in Drive 0, enter RUN "SIDWAYS" to start the program.

The first prompt that appears onscreen asks "Is this reversed?" If the text is reversed or otherwise garbled, press Y; otherwise press N. Next you are prompted for a filename; enter the name of the file you want to print (any ASCII text file). When you are asked for the number of lines between pages, enter any value or press ENTER to accept the default (five lines). Finally you are asked whether you want standard or condensed printing; press S or C accordingly. During printing, the monitor is blanked to prevent burn-in.

*Sideways* must be run from a 32-column

With the DMP-120, *Sideways* lets you print in two styles: standard and condensed. The Standard mode allows 47 lines of up to 115 characters each on one page. In the Condensed mode, *Sideways* can handle 79 lines of 115 characters. And if you use fanfold or continuous-roll paper, you can increase the length of the lines up to 255 characters.

#### Up and Running

The *Sideways* system consists of two programs: SIDWAYS.BAS (Listing 1) and BITTEST.BIN, a machine-language program

## GRANITE COMPUTER SYSTEMS

### ZOOM MODEMS

**NEW! 14,400 BPS ZOOM V.32bis/V.42/V.42bis data modems.** MNP1.5+LAPM. Error Correction and data compression (much higher effective throughput—as much as 57,600 BPS). Two Year Warranty. External \$339/Internal \$299 (+\$9 S&H)

**NEW LOWER PRICE! 9600 BPS ZOOM V.32/V.42/V.42bis data modems.** MNP1.5+LAPM. Error Correction and data compression (much higher effective throughput—as much as 38400 BPS). Two Year Warranty. External \$299/Internal \$279 (+\$9 S&H)

**NEW LOWER PRICE! 2400 BPS ZOOM V.42/V.42bis data modems.** MNP1.5+LAPM. Error correction and data compression (much higher effective throughput—as much as 9600 BPS). Two Year Warranty. External \$149 (+\$9 S&H)

**NEW PRODUCT! 9600 BPS ZOOM Send/Receive Fax modems.** Send/Receive text/graphic files from/to your computer/any Fax machine in the world. Full 2400 BPS data modem capability. Seven Year Warranty. Includes PC or MAC FAX software. External \$139/Internal \$129 (+\$6 S&H)

**NEW LOWER PRICE! 2400 BPS ZOOM Data modems.** Seven Year Warranty. External \$85/Internal \$75 (+\$6 S&H)

These are all high quality modems made by Zoom Telephonics in the USA. Fully Hayes compatible. Terminal and Windows Fax software available. Cables available. S&H Canada (Air PP and Ins): V.32, V.42/V.42bis \$13.00 Send/Receive Fax/Data \$9.00

### GCS FILE TRANSFER UTILITIES — Version 3.0

The GCS File Transfer Utilities provide a simple and quick method to transfer text/binary files from/to a variety of floppy disk formats.

Commands PC, RS, FLEX disks: Dir, Dump, Read, Write  
PC disks: Rename, Delete, Format

Handles most 5.25 and 3.5 formats. Any level sub-directories (PC). Binary files. Use pipes for multiple file transfers. Multi-Vue version can be used under Multi-Vue or as stand alone Shell commands.

Requires OS-9 L2 for COCO 3, L1 for COCO 1 or 2. 2 drives (one can be hard/ramdisk, one floppy 40 T DD DS). Multi-Vue for Multi-Vue version. SDISK3 for COCO3 - SDISK for COCO 1 or 2.

OSK version price	\$99.95
Multi-Vue version	\$54.95
Standard version	\$44.95
V3.0 updates (provide disk number)	\$25.00/\$15.00

D.P. Johnson Software SDISK or SDISK3 \$29.95 L1+L2 Utils \$75.00 Shipping and handling — any software \$2.50 U.S.A., \$3.00 Canada Orders must be prepaid or COD. VISA/MC accepted. COD is additional.

## Announcing **Icon Basic09**

The next programming language for OS-9!

**Icon Basic09** is a graphical user interface (GUI) to Basic09, which will make programming easier than ever! **Icon Basic09** takes an innovative approach by using graphic representations, or icons, to represent statements and keywords for writing Basic09 programs and procedures. Instead of constantly typing while writing a program, the user can simply point & click to choose the desired statement!

**Icon Basic09** can also be very useful in studying procedures and programs written by others to learn how they operate. The package contains a full set of icons...or, you may edit or create icons using the included icon editor. **Icon Basic09** requires a CoCo-3 with at least 256K, mouse or joystick, and OS-9 lv.2.

**\$20**

<b>Dual hi-res joystick adapter</b> (RS/Colorware)	<b>\$40</b>

## The Rainbow Bookshelf

**The Rainbow Book of Simulations**, 20 award-winning entries from THE RAINBOW's first Simulations contest.

**The Second Rainbow Book of Simulations**, the 16 Winners from our second Simulations contest.

**The Complete Rainbow Guide to OS-9**, authors Dale Puckett and Peter Dibble demonstrate OS-9's multitasking and multiuser features.

**The Complete Rainbow Guide to OS-9 Level II Vol. I: A Beginner's Guide to Windows**, Puckett and Dibble uncover the mysteries of the new windowing environment.

**The First Rainbow Book of Adventures**, contains 14 winning programs from our first Adventure contest.

**The Second Rainbow Book of Adventures**, featuring 24 of the most challenging Adventure games ever compiled.

**The Third Rainbow Book of Adventures**, the excitement continues with 19 new Adventures.

**The Fourth Book of Adventures**, fourteen fascinating new Adventures from the winners of our fourth Adventure competition.

**A Full Turn of the Screw**

**The Rainbow Introductory Guide to Statistics**, Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes.

Mail to: Rainbow Bookshelf, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. To order by phone (credit card orders only) call (800) 847-0309, 9 a.m. to 5 p.m. EST. For other inquiries call (502) 228-4492. Please note: The tapes and disks offered by The Rainbow Bookshelf are not stand-alone products. That is, they are intended to be an adjunct and complement to the books. Even if you buy the tape or disk, you will still need the appropriate book for loading and operating instructions. OS-9 is a registered trademark of the Microware Systems Corporation.

screen because of the massive amount of string space it needs. Do not change the WIDTH statement to 40 or 80. If you press BREAK to abort the program, however, the string space is deallocated and you can safely use the 40- or 80-column screen. The string space is also deallocated when the program finishes printing and exits.

### Restrictions and Modifications

As I stated before, you can use just about any Hi-Res font for printing (you must supply your own fonts). The restriction is that any font you use should not have the left-most bit set in any of the character-forming bytes. The left-most bit (or vertical line in the character) will not be printed. To use an alternate font with Sideways, simply load it before running the program.

The above restriction is based on the fact that the Tandy graphics-printing mode

supports only seven bits — only seven printer pins are used to print graphics data. The purpose of BITTEST.BIN is to flip the order of the first seven bits (to put them in the correct order for printing by Tandy printers) and to reset the left-most (eighth) bit to zero.

The control codes used in the program appear in lines 570, 580 and 860. Their functions are shown in Figure 2. While Sideways is designed to work with the DMP-120, you should be able to use it with most older Radio Shack dot-matrix printers without modifying the control codes.

*Jeff Hameluck is a student at the University of Regina and works as a computer operator at the Regina Public Library. He has been a member of the CoCo Community for 11 years.*

**Feature Program**

# Quick Reflexes Are a Must

**T**est Your Luck is a two-player game that requires a little patience, fast reflexes and a lot of luck. When it is run, this CoCo 3 program draws 16 blocks around the outside edge of the screen. In each box is a phrase such as You Win \$100 or You Lose a Turn, but the phrases don't immediately appear onscreen. The goal is to be the first player whose total winnings meet or exceed \$1000, and both players start with an empty bank. Achieving this goal takes some work, though.

One at a time, in random fashion, the phrases are briefly flashed onscreen where their associated boxes are located. When a phrase is displayed, any keypress selects that box and the player wins (or loses) accordingly. The flashing "cursor" moves quickly, so you'll have to read fast to catch it with a keypress. (This is where patience comes in handy — once you know where the phrases are located, you can wait for the good ones to light up.)

Player 1 always goes first. You can tell whose turn it is by looking at the numbers next to players' names — the current player's number is highlighted. If a player selects Lose a Turn or Bankrupt, the other player gets a turn. However, while control is transferred, selecting Bankrupt does not cause you to lose a turn. Each player starts with three turns (lives). If you have at least \$200 in your bank, you can buy another turn

by pressing B. The first person to reach \$1000 wins. You also win if your opponent runs out of lives.

One last note: An empty bank (zero dollars) is not the lowest amount you can get. If you drop below zero, you'll have to work your way out of the red, one chunk at a time; the CoCo 3 knows better than to think you could save yourself with a Bankrupt at this point.

Test Your Luck is written for the CoCo 3 and does not require a disk drive. The program does not use the high-speed poke (POKE 65497,0) — make sure the computer is at normal speed (POKE 65496,0) before saving it to tape or disk. I wish you the best of luck with Test Your Luck!

*John A. Saya is 14 years old and enjoys programming the Color Computer. He may be contacted at 618 N. Townsend Street, Syracuse, NY 13203.*

## UNBELIEVABLE OFFER #3

### Twenty Programs From Rick

**ONLY \$20.00**  
PLUS \$2.00 Shipping/Handling

RICK'S TREASURE CHEST  
✓EDUCATION

1. CIRMMATH	2. MYMICRO	3. SPELLING	4. USDRILL
For young students. Practice single digit addition.	Learn the parts of a microscope.	A colorful spelling program. Use your own spelling words.	A great states and capitals tutor. Identify & locate options.

5. TUTOR	6. LOCATE	7. PRESIDENTS	8. TICTACMATH
Learn about latitude, longitude, equator, prime meridian.	Practice latitude & longitude calls, includes countries, cities, continents, landmarks.	A challenging two part educational exercise.	Play tic tac toe while you practice single & double digit math

### GAMES

9. HANGMAN	10. NUMSLIDE	11. STONES	12. WHEELS
An old favorite, colorful format.	Childhood number slide puzzle.	Colorful sound, light game based on SIMON	A most challenging puzzle based on popular model.

13. CONNECTS	14. DISCOVER	15. PIXSLIDE	16. TAKESOME
Fun game based on a game show.	New game using SCRABBLE type gameboard.	A fun picture slide puzzle.	Challenge the COCO in this fun game.

### HOME HELP

17. SHOPPER	- Use this home helper to save money while grocery shopping.
-------------	--

### UTILITIES

18. TRANSPIX	19. COLPRINT
Transfer your PMODE 4 pictures to HSCREEN 2.	Print your HSCREEN 2 pictures in color with your NX STAR 1000. NO MORE MIXING COLORS. Uses built-in table for easy use.

These programs require COCO 3 and RGB monitor.  
Thanks in advance for helping me continue to support the COCO community with my software and RAINBOW with my ads!

# Gone Fishin'

Everyone who likes to fish has at some time had to tell of the one that got away. Thanks to the power of the CoCo 3 we can now see what's going on down there. This short program uses animation to take us below the surface, where we begin to understand the cunning nature of our adversary.

As an aid to beginners entering this program, I want to point out a few minor pitfalls. The program is designed for use with a television or composite color monitor. If you're using an RGB monitor, you'll have to change the PALETTE commands in lines 20 and 125 to get the right colors.

Also, if the program starts with a blue background then fills with another color, you'll find the problem in the data statements (lines 190 through 225).

The next time someone asks you about the one that got away, you can show them how it happened.

*Roger Severs joined the CoCo Community in 1982. He enjoys writing programs in BASIC and is currently learning 6809 assembly language and BASIC09. He may be contacted at HCR7, Box 218, Doniphan, MO 63935.*
